Chapter 1

Introduction

1

This Chapter provides an overview of the WBR-3407's features and capabilities.

Congratulations on the purchase of your new WBR-3407. The WBR-3407 is a multi-function device providing the following services:

- **ADSL Modem.**
- **Shared Broadband Internet Access** for all LAN users.
- **WBR3407** for 802.11b and 802.11g Wireless Stations.
- **4-Port Switching Hub** for 10BaseT or 100BaseT connections.

Wireless LAN

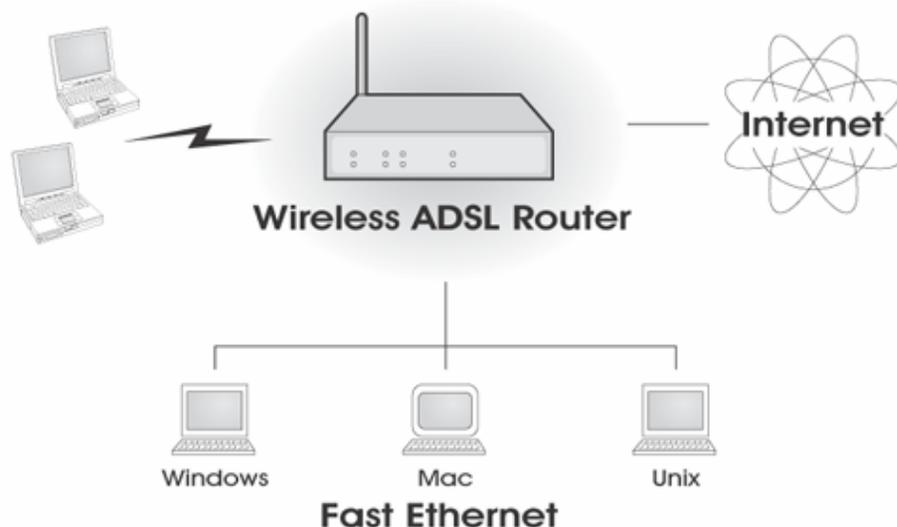

Figure 1: WBR-3407

WBR-3407 Features

The WBR-3407 incorporates many advanced features, carefully designed to provide sophisticated functions while being easy to use.

Internet Access Features

- **Shared Internet Access.** All users on the LAN or WLAN can access the Internet through the WBR-3407, using only a single external IP Address. The local (invalid) IP Addresses are hidden from external sources. This process is called NAT (Network Address Translation).
- **Built-in ADSL Modem.** The WBR-3407 has a built-in ADSL modem, supporting all common ADSL connections.
- **IPoA, PPPoE, PPPoA, Direct Connection Support.** The WBR-3407 supports all common connection methods.

- ***Auto-detection of Internet Connection Method.*** In most situations, the WBR-3407 can test your ADSL and Internet connection to determine the connection method used by your ISP.
- ***Fixed or Dynamic IP Address.*** On the Internet (WAN port) connection, the WBR-3407 supports both Dynamic IP Address (IP Address is allocated on connection) and Fixed IP Address.

Advanced Internet Functions

- ***Application Level Gateways (ALGs).*** Applications which use non-standard connections or port numbers are normally blocked by the Firewall. The ability to define and allow such applications is provided, to enable such applications to be used normally.
- ***Virtual Servers.*** This feature allows Internet users to access Internet servers on your LAN. The required setup is quick and easy.
- ***URL Filter.*** Use the URL Filter to block access to undesirable Web sites by LAN users.
- ***Logs.*** Define what data is recorded in the Logs, and optionally send log data to a Syslog Server. Log data can also be E-mailed to you.
- ***Firewall.*** As well as the built-in firewall to protect your LAN, you can define Firewall Rules to determine which incoming and outgoing traffic should be permitted.
- ***Dynamic DNS Support.*** DDNS, when used with the Virtual Servers feature, allows users to connect to Servers on your LAN using a Domain Name, even if you have a dynamic IP address which changes every time you connect.
- ***VPN Pass through Support.*** PCs with VPN (Virtual Private Networking) software using PPTP, L2TP and IPSec are transparently supported - no configuration is required.

Wireless Features

- ***Standards Compliant.*** The WBR-3407 complies with the IEEE802.11g (DSSS) specifications for Wireless LANs.
- ***Supports both 802.11b and 802.11g Wireless Stations.*** The 802.11g standard provides for backward compatibility with the 802.11b standard, so both 802.11b and 802.11g Wireless stations can be used simultaneously.
- ***Speeds to 54Mbps.*** All speeds up to the 802.11g maximum of 54Mbps are supported.
- ***WEP support.*** Support for WEP (Wired Equivalent Privacy) is included. Key sizes of 64 Bit and 128 Bit are supported.
- ***WPA-PSK support.*** Support for the WPA-PSK is included. This version of WPA does not require a Radius Server on your LAN.
- ***WPA-802.1x support.*** Support for the WPA-PSK is included. This version of WPA requires a Radius Server on your LAN.
- ***Wireless MAC Access Control.*** The Wireless Access Control feature can check the MAC address (hardware address) of Wireless stations to ensure that only trusted Wireless Stations can access your LAN.
- ***Simple Configuration.*** If the default settings are unsuitable, they can be changed quickly and easily.

LAN Features

- ***4-Port Switching Hub.*** The WBR-3407 incorporates a 4-port 10/100BaseT switching hub, making it easy to create or extend your LAN.

- **DHCP Server Support.** Dynamic Host Configuration Protocol provides a dynamic IP address to PCs and other devices upon request. The WBR-3407 can act as a **DHCP Server** for devices on your local LAN and WLAN.

Configuration & Management

- **Easy Setup.** Use your WEB browser from anywhere on the LAN or WLAN for configuration.
- **Configuration File Upload/Download.** Save (download) the configuration data from the WBR-3407 to your PC, and restore (upload) a previously-saved configuration file to the WBR-3407.
- **Remote Management.** The WBR-3407 can be managed from any PC on your LAN. And, if the Internet connection exists, it can also (optionally) be configured via the Internet.
- **Network Diagnostics.** You can use the WBR-3407 to perform a *Ping* or *DNS lookup*.

Security Features

- **Password - protected Configuration.** Optional password protection is provided to prevent unauthorized users from modifying the configuration data and settings.
- **Wireless LAN Security.** WEP (Wired Equivalent Privacy) is supported, as well as Wireless access control to prevent unknown wireless stations from accessing your LAN.
- **NAT Protection.** An intrinsic side effect of NAT (Network Address Translation) technology is that by allowing all LAN users to share a single IP address, the location and even the existence of each PC is hidden. From the external viewpoint, there is no network, only a single device - the WBR-3407.
- **Firewall.** All incoming data packets are monitored and all incoming server requests are filtered, thus protecting your network from malicious attacks from external sources.
- **Protection against DoS attacks.** DoS (Denial of Service) attacks can flood your Internet connection with invalid packets and connection requests, using so much bandwidth and so many resources that Internet access becomes unavailable. The WBR-3407 incorporates protection against DoS attacks.

Package Contents

The following items should be included:

- The WBR-3407 Unit
- 1 Cat-5 Ethernet (LAN) cable
- 1 RJ-11 (ADSL) cable
- Power Adapter
- Quick Installation Guide
- CD-ROM containing the on-line manual.

If any of the above items are damaged or missing, please contact your dealer immediately.

Physical Details

Front-mounted LEDs

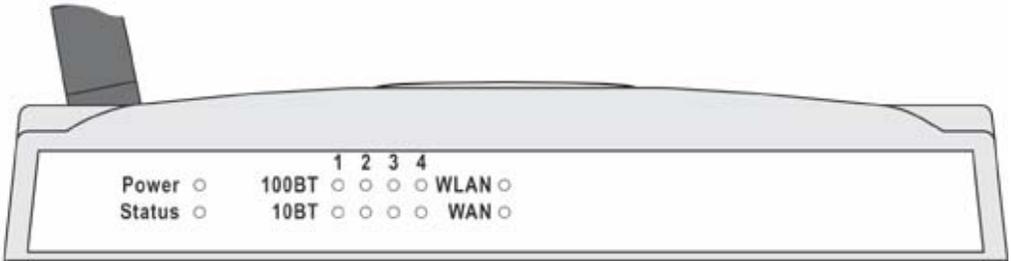

Figure 2: Front Panel

- Power LED (Green)** **On** - Power on.
Off - No power.
- Status LED (Yellow)** **Off** - Normal operation.
Blinking - This LED blinks during start up, and during a Firmware Upgrade.
- LAN** For each port, there are 2 LEDs, to indicate the connection speed (10BaseT or 100BaseT) of each port.
- **100BT** - This will be ON if the LAN connection is using 100BaseT, and Blinking if data is being transferred via the corresponding LAN port.
 - **10BT** - This will be ON if the LAN connection is using 10BaseT, and Blinking if data is being transferred via the corresponding LAN port.
 - If neither LED is on, there is no active connection on the corresponding LAN port.
- WLAN LED** **On** – Wireless enabled.
Off - No Wireless connections currently exist.
Flashing - Data is being transmitted or received via the WBR3407. This includes "network traffic" as well as user data.
- WAN** **On** - ADSL connection is available.
Off - No ADSL connection.
Flashing - Data is being transmitted or received via the ADSL connection.

Rear Panel

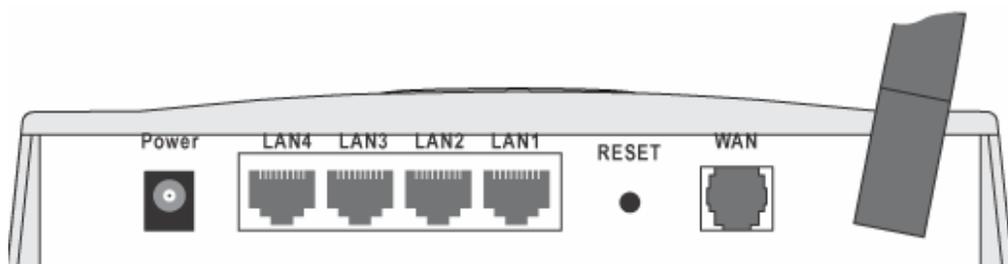

Figure 3: Rear Panel

Power port

Connect the supplied power adapter here.

**10/100BaseT
LAN connections**

Use standard LAN cables (RJ45 connectors) to connect your PCs to these ports.

Note:

Any LAN port on the WBR-3407 will automatically function as an "Uplink" port when required. Just connect any port to a normal port on the other hub, using a standard LAN cable.

**Reset Button
(Reset to Defaults)**

This button will reset the WBR-3407 to the factory default settings. To do this, press and hold the Reset Button for five (5) seconds, until the Status LED is lit, then release the Reset Button, and wait the WBR-3407 to restart using the factory default values.

**WAN port
(ADSL port)**

Connect this port to your ADSL line.

Chapter 2

Installation

2

This Chapter covers the physical installation of the WBR-3407.

Requirements

- Network cables. Use standard 10/100BaseT network (UTP) cables with RJ45 connectors.
- TCP/IP protocol must be installed on all PCs.
- For Internet Access, an Internet Access account with an ISP, and a DSL connection.
- To use the WBR3407, all Wireless devices must be compliant with the IEEE 802.11g or IEEE 802.11b specifications.

Procedure

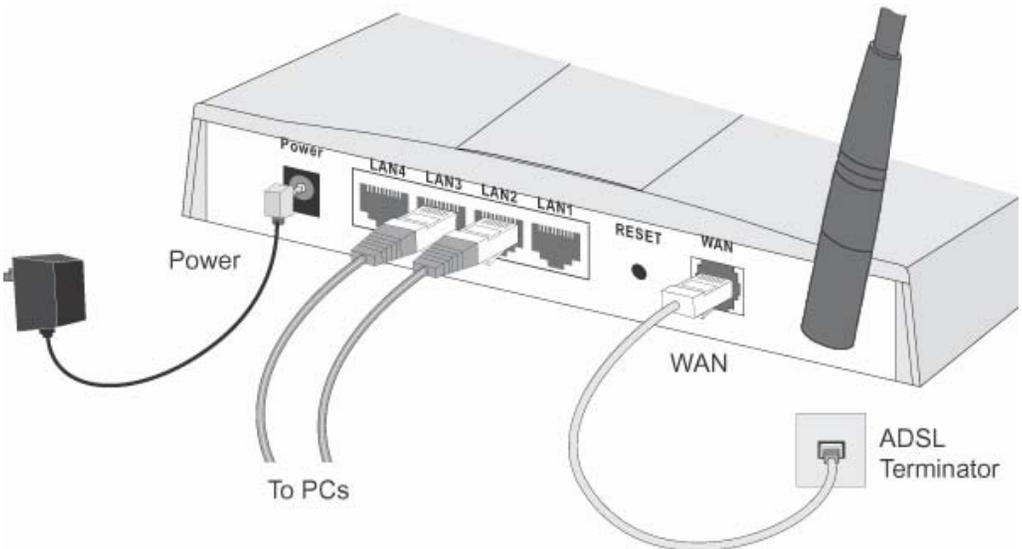

Figure 4: Installation Diagram

1. Choose an Installation Site

Select a suitable place on the network to install the WBR-3407.

For best Wireless reception and performance, the WBR-3407 should be positioned in a central location with minimum obstructions between the WBR-3407 and the PCs.

Also, if using multiple Access Points, adjacent Access Points should use different Channels.

2. Connect LAN Cables

Use standard LAN cables to connect PCs to the Switching Hub ports on the WBR-3407. Both 10BaseT and 100BaseT connections can be used simultaneously.

If required, connect any port to a normal port on another Hub, using a standard LAN cable. Any LAN port on the WBR-3407 will automatically function as an "Uplink" port when required.

3. Connect ADSL Cable

Connect the supplied ADSL cable from to the WAN port on the WBR-3407 (the RJ11 connector) to the ADSL terminator provided by your phone company.

4. Power Up

Connect the supplied power adapter to the WBR-3407 and power up.

Use only the power adapter provided. Using a different one may cause hardware damage

5. Check the LEDs

- The *Power* LED should be ON.
- The *Status* LED should flash, then turn Off. If it stays on or blinking after 60 seconds, there is a hardware error.
- For each LAN (PC) connection, one of the LAN LEDs should be ON (provided the PC is also ON.)
- The *WLAN* LED should be ON
- The *WAN* LED should be ON if ADSL line is connected.

For more information, refer to *Front-mounted LEDs* in Chapter 1.

Chapter 3

Setup

This Chapter provides Setup details of the WBR-3407.

Overview

This chapter describes the setup procedure for:

- Internet Access
- LAN configuration
- Wireless setup
- Assigning a Password to protect the configuration data.

PCs on your local LAN may also require configuration. For details, see *Chapter 4 - PC Configuration*.

Other configuration may also be required, depending on which features and functions of the WBR-3407 you wish to use. Use the table below to locate detailed instructions for the required functions.

| To Do this: | Refer to: |
|--|--------------------------------------|
| Configure PCs on your LAN. | Chapter 4: PC Configuration |
| Check WBR-3407 operation and Status. | Chapter 5: Operation and Status |
| Use any of the following Advanced features: <ul style="list-style-type: none">• Internet• Dynamic DNS• Firewall Rules• Firewall Services• Schedule• Virtual Servers | Chapter 6: Advanced Features |
| Use any of the following Administration Configuration settings or features: <ul style="list-style-type: none">• PC Database• Config File• Logging• E-mail• Diagnostics• Remote Admin• Routing• Upgrade Firmware | Chapter 7 Advanced Administration |

Configuration Program

The WBR-3407 contains an HTTP server. This enables you to connect to it, and configure it, using your Web Browser. **Your Browser must support JavaScript.**

The configuration program has been tested on the following browsers:

- Netscape V4.08 or later
- Netscape 7
- Internet Explorer V5.01 or later

Preparation

Before attempting to configure the WBR-3407, please ensure that:

- Your PC can establish a physical connection to the WBR-3407. The PC and the WBR-3407 must be directly connected (using the Hub ports on the WBR-3407) or on the same LAN segment.
- The WBR-3407 must be installed and powered ON.
- If the WBR-3407's default IP Address (192.168.0.1) is already used by another device, the other device must be turned OFF until the WBR-3407 is allocated a new IP Address during configuration.

Using your Web Browser

To establish a connection from your PC to the WBR-3407:

1. After installing the WBR-3407 in your LAN, start your PC. If your PC is already running, restart it.
2. Start your WEB browser.
3. In the *Address* box, enter "HTTP://" and the IP Address of the WBR-3407, as in this example, which uses the WBR-3407's default IP Address:
`HTTP://192.168.0.1`
4. When prompted for the User name and Password, enter values as follows:
 - User name admin
 - Password password

If you can't connect

If the WBR-3407 does not respond, check the following:

- The WBR-3407 is properly installed, LAN connection is OK, and it is powered ON. You can test the connection by using the "Ping" command:
 - Open the MS-DOS window or command prompt window.
 - Enter the command:
`ping 192.168.0.1`
 If no response is received, either the connection is not working, or your PC's IP address is not compatible with the WBR-3407's IP Address. (See next item.)
- If your PC is using a fixed IP Address, its IP Address must be within the range 192.168.0.2 to 192.168.0.254 to be compatible with the WBR-3407's default IP Address of 192.168.0.1. Also, the *Network Mask* must be set to 255.255.255.0. See *Chapter 4 - PC Configuration* for details on checking your PC's TCP/IP settings.
- Ensure that your PC and the WBR-3407 are on the same network segment. (If you don't have a router, this must be the case.)
- Ensure you are using the wired LAN interface. The Wireless interface can only be used if its configuration matches your PC's wireless settings.

WAN Setup Wizard

The first time you connect to the WBR-3407, the WAN (Internet) Setup Wizard will run automatically. (The Setup Wizard will also run if the WBR-3407's default settings are restored.)

1. Step through the Wizard until finished.
 - You need the data supplied by your ISP. Most connection methods require some data input.
 - The common connection types are explained in the following table.
2. On the final screen of the Wizard, run the test and check that an Internet connection can be established.
3. If the connection test fails:
 - Check all connections, and the front panel LEDs.
 - Check that you have entered all data correctly.

Common Connection Types

| Type | Details | ISP Data required |
|---------------------------|---|--|
| Dynamic IP Address | Your IP Address is allocated automatically, when you connect to you ISP. | <p>a) ADSL parameters (VPI and VCI) may be required, if they cannot be detected automatically.</p> <p>b) Some ISP's may require you to use a particular <i>Hostname</i> or <i>Domain</i> name, or MAC (physical) address.</p> |
| Static (Fixed) IP Address | Your ISP allocates a permanent IP Address to you. Usually, the connection is "Always on". | <p>a) ADSL parameters (VPI and VCI) may be required, if they cannot be detected automatically.</p> <p>b) IP Address allocated to you, and related information, such as Network Mask, Gateway IP address, and DNS address.</p> |
| PPPoE, PPPoA | You connect to the ISP only when required. The IP address is usually allocated automatically. | <p>a) ADSL parameters (VPI and VCI) may be required, if they cannot be detected automatically.</p> <p>b) User name and password are always required.</p> <p>c) If using a Static (Fixed) IP address, you need the IP address and related information (Network Mask, Gateway IP address, and DNS address)</p> |
| IPoA (IP over ATM) | Normally, the connection is "Always on". | <p>a) ADSL parameters (VPI and VCI) may be required, if they cannot be detected automatically.</p> <p>b) IP Address allocated to you, and related information, such as Network Mask, Gateway IP address, and DNS address.</p> |

Home Screen

After finishing the Setup Wizard, you will see the *Home* screen. When you connect in future, you will see this screen when you connect. An example screen is shown below.

Figure 5: Home Screen

Main Menu

The main menu, on the left, contains links to the most-commonly used screen. To see the links to the other available screens, click "Advanced" or "Administration".

The main menu also contains two (2) buttons:

- **Log Out** - When finished, you should click this button to logout.
- **Restart** - Use this if you wish to restart the WBR-3407. Note that restarting the Router will break any existing connections to or through the Router.

Navigation & Data Input

- Use the menu bar on the left of the screen, and the "Back" button on your Browser, for navigation.
- Changing to another screen without clicking "Save" does NOT save any changes you may have made. You must "Save" before changing screens or your data will be ignored.

On each screen, clicking the "Help" button will display help for that screen.

Mode Screen

Use the *Mode* link on the main menu to reach the Mode screen. An example screen is shown below.

The screenshot shows a dark blue interface with the word "Mode" in large yellow letters at the top. Below it, the text "Device Mode" is followed by three configuration fields: "Device Name: WBR-3407A", "Device Mode: Modem (Modem only)", and "Language: English". At the bottom right, there are two buttons labeled "Save" and "Help".

Figure 6: LAN Screen

Data - Mode Screen

| Device Mode | |
|--------------------|--|
| Device Name | This field displays the current name of this device. |
| Device Mode | <p>Select the desired device mode for the router:</p> <ul style="list-style-type: none"> • Router - Both the ADSL Modem and the Router features are operational. In this mode, this device can provide shared Internet Access to all your LAN users. • Modem - Only the ADSL Modem component is operational. All Router features are disabled. This device is "transparent" - it does not perform any operations or make any changes to the network traffic passing through it. <p>Note:</p> <ul style="list-style-type: none"> • If the mode is changed, this device must restart when you save. • You will lose the connection until the restart is completed. • The menu will change when the mode is changed. Many features are only available in Router mode. |
| Language | Select the desired language for this user interface. |

LAN Screen

Use the *LAN* link on the main menu to reach the LAN screen. An example screen is shown below.

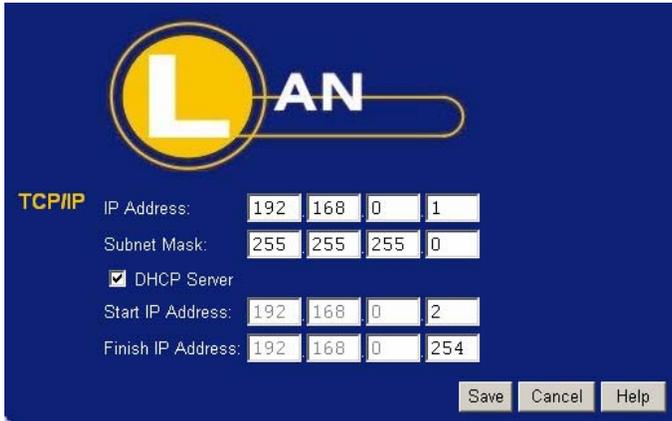

Figure 7: LAN Screen

Data - LAN Screen

| TCP/IP | |
|--------------------|--|
| IP Address | IP address for the WBR-3407, as seen from the local LAN. Use the default value unless the address is already in use or your LAN is using a different IP address range. In the latter case, enter an unused IP Address from within the range used by your LAN. |
| Subnet Mask | The default value 255.255.255.0 is standard for small (class "C") networks. For other networks, use the Subnet Mask for the LAN segment to which the WBR-3407 is attached (the same value as the PCs on that LAN segment). |
| DHCP Server | <ul style="list-style-type: none"> • If Enabled, the WBR-3407 will allocate IP Addresses to PCs (DHCP clients) on your LAN when they start up. The default (and recommended) value is Enabled. • If you are already using a DHCP Server, this setting must be Disabled, and the existing DHCP server must be re-configured to treat the WBR-3407 as the default Gateway. See the following section for further details. • The Start IP Address and Finish IP Address fields set the values used by the DHCP server when allocating IP Addresses to DHCP clients. This range also determines the number of DHCP clients supported. <p>See the following section for further details on using DHCP.</p> |

DHCP

What DHCP Does

A DHCP (Dynamic Host Configuration Protocol) **Server** allocates a valid IP address to a DHCP **Client** (PC or device) upon request.

- The client request is made when the client device starts up (boots).
- The DHCP Server provides the *Gateway* and *DNS* addresses to the client, as well as allocating an IP Address.
- The WBR-3407 can act as a **DHCP server**.
- Windows 95/98/ME and other non-Server versions of Windows will act as a DHCP **client**. This is the default Windows setting for the TCP/IP network protocol. However, Windows uses the term *Obtain an IP Address automatically* instead of "DHCP Client".
- You must NOT have two (2) or more DHCP Servers on the same LAN segment. (If your LAN does not have other Routers, this means there must only be one (1) DHCP Server on your LAN.)

Using the WBR-3407's DHCP Server

This is the default setting. The DHCP Server settings are on the **LAN** screen. On this screen, you can:

- Enable or Disable the WBR-3407's *DHCP Server* function.
- Set the range of IP Addresses allocated to PCs by the DHCP Server function.

Note!

You can assign Fixed IP Addresses to some devices while using DHCP, provided that the Fixed IP Addresses are NOT within the range used by the DHCP Server.

Using another DHCP Server

You can only use one (1) DHCP Server per LAN segment. If you wish to use another DHCP Server, rather than the WBR-3407's, the following procedure is required.

1. Disable the DHCP Server feature in the WBR-3407. This setting is on the LAN screen.
2. Configure the DHCP Server to provide the WBR-3407's IP Address as the *Default Gateway*.

To Configure your PCs to use DHCP

This is the default setting for TCP/IP for all non-Server versions of Windows.

See *Chapter 4 - Client Configuration* for the procedure to check these settings.

Wireless Screen

The WBR-3407's settings must match the other Wireless stations.

Note that the WBR-3407 will automatically accept both 802.11b and 802.11g connections, and no configuration is required for this feature.

To change the WBR-3407's default settings for the WBR3407 feature, use the *Wireless* link on the main menu to reach the *Wireless* screen. An example screen is shown below.

Figure 8: Wireless Screen

Data - Wireless Screen

| Identification | |
|--------------------------|--|
| Regulatory Domain | Select the correct domain for your location. It is your responsibility to ensure: <ul style="list-style-type: none"> • That the WBR-3407 is only used in domains for which is licensed. • That you select the correct domain, so that only the legal channels for that domain can be selected. |
| Station name | This is the same as the "Device Name" for the WBR-3407. |
| SSID (ESSID) | <ul style="list-style-type: none"> • If using an ESS (Extended Service Set, with multiple access points) this ID is called an ESSID (Extended Service Set Identifier). • To communicate, all Wireless stations should use the same SSID/ESSID. |

| Options | |
|-------------------------------------|---|
| Mode | <p>Select the desired mode:</p> <ul style="list-style-type: none"> • g & b - Both 802.11.g and 802.11b Wireless stations will be able to use the WBR-3407. • g only - Only 802.11g Wireless stations can use the WBR-3407. • b only - Only 802.11b connections are available. 802.11g Wireless Stations will only be able to use the WBR-3407 if they are fully backward-compatible with the 802.11b standard. |
| Channel No. | <ul style="list-style-type: none"> • Select the Channel you wish to use on your Wireless LAN. • If you experience interference (shown by lost connections and/or slow data transfers) you may need to experiment with different channels to see which is the best. • If using multiple Access Points, adjacent Access Points should use different Channels to reduce interference. |
| Broadcast SSID | <p>If enabled, the WBR-3407 will broadcast its SSID. This allows Wireless Stations will a "null" (blank) SSID to detect and use the correct SSID.</p> <p>Disable this feature if you do not want Wireless stations to be able to do this.</p> |
| Options | |
| Curent Setting | The curent setting is displayed. The default value is "Disabled" - no security. |
| Configure Button | Click this button to view the Wireless security sub-screen. See the following section for more details. |
| Access Point | |
| Enable Wireless Access Point | Enable this if you want to use WBR3407 function. If disabled, no Wireless stations can use the Access Point function, and all connections must be make via the wired LAN. |
| Allow access by ... | <p>Use this feature to determine which Wireless stations can use the Access Point. The options are:</p> <ul style="list-style-type: none"> • All Wireless Stations - All wireless stations can use the access point, provided they have the correct SSID and WEP settings. • Trusted Wireless stations only - Only wireless stations you designate as "Trusted" can use the access point, even if they have the correct SSID and WEP settings. This feature uses the MAC address to identify Wireless stations. The MAC address is a low-level network identifier which is unique to each PC or network device. To define the trusted wireless stations, use the "Set Stations" button. |
| Set Stations Button | Click this button to manage the trusted PC database. |

Wireless Security

The Wireless Security sub-screen is accessed by the "Configure" button on the Wireless screen.

It provides 4 options for Wireless Security:

- **Disabled** - No security is used.
- **WEP** - Data is encrypted using the WEP standard.
- **WPA-PSK** - Data is encrypted using the WPA standard. Each Wireless station must have the same Pres-shared Key (PSK).
- **WPA-802.1x** - This system requires that a Radius Server be used for Authentication. Data is encrypted using WPA, but the keys are automatically generated, and do not need to be entered.

Wireless Security - WEP

If WEP is selected, the screen will look like the following:

Figure 9: WEP Screen

Data - WEP Screen

| | |
|----------------------------|--|
| Authentication Type | Normally, this should be left at the default value of "Automatic". If changed to "Open System" or "Shared Key", ensure that your Wireless Stations use the same setting. |
| Key Size | Select the option to match other Wireless Stations: <ul style="list-style-type: none"> • 64 Bit - data is encrypted, using the default key, before being transmitted. You must enter at least the default key. For 64 Bit Encryption, the key size is 10 chars in HEX (0~9 and A~F). • 128 Bit - data is encrypted, using the default key, before being transmitted. You must enter at least the default key. For 128 Bit Encryption, the key size is 26 chars in HEX (0~9 and A~F). |
| Default Key | Select the key you wish to be the default. Transmitted data is ALWAYS encrypted using the Default Key; the other Keys are for decryption only. |

| | |
|-------------------|---|
| | You must enter a Key Value for the Default Key . |
| Key Value | Enter the key value or values you wish to use. The Default Key is required, the other keys are optional. Other stations must have the same key. |
| Passphrase | If desired, you can generate a key from a phrase, instead of entering the key value directly. Enter the desired phrase, and click the "Generate Keys" button. |

Wireless Security - WPA-PSK

If WPA-PSK is selected, the screen will look like the following:

Figure 10: WPA-PSK Screen

Data - WPA-PSK Screen

| | |
|---------------------|--|
| PSK | Also called the "Network Key". Enter the key value. Data is encrypted using a 256Bit key derived from this key. Other Wireless Stations must use the same key. |
| Key Lifetime | Enter the required time period. |
| Encryption | Select the desired option. Other Wireless Stations must use the same method. |

Wireless Security - WPA-802.1x

If WPA-802.1x is selected, the screen will look like the following.

Note that to use 802.1x:

- You need a Radius Server.
- The Radius Server must have "Client" login for the WBR-3407, using its IP address and the the "Shared Key" set on this screen.
- Each client (user) must obtain a Certificate to authenticate against the Radius Server. See Chapter 4 - PC Configuration for details.

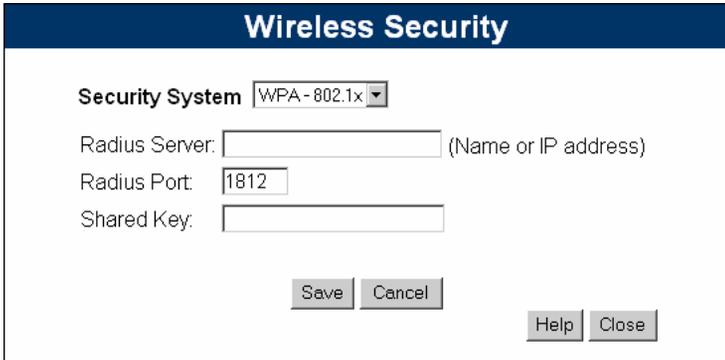

Figure 11: WPA-802.1x Screen

Data - WPA-802.1x Screen

| | |
|------------------------------|--|
| Radius Server Address | Enter the name or IP address of the Radius Server on your network. |
| Radius Port | Enter the port number used for connections to the Radius Server. |
| Shared Key | This is used for the <i>Client Login</i> on the Radius Server. Enter the key value to match the Radius Server. |

Note: The Encryption method used is TKIP.

Password Screen

The password screen allows you to assign a password to the WBR-3407.

Figure 12: Password Screen

| | |
|-----------------|--|
| Old Password | Enter the existing password in this field. |
| New password | Enter the new password here. |
| Verify password | Re-enter the new password here. |

You will be prompted for the password when you connect, as shown below.

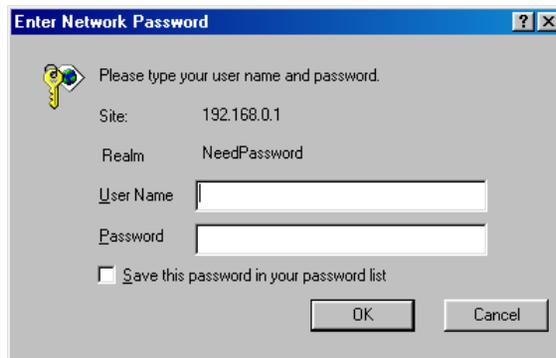

Figure 13: Password Dialog

- The "User Name" is always `admin`
- Enter the password for the WBR-3407, as set on the *Password* screen above.

Chapter 4

PC Configuration

This Chapter details the PC Configuration required on the local ("Internal") LAN.

Overview

For each PC, the following may need to be configured:

- TCP/IP network settings
- Internet Access configuration
- Wireless configuration

Windows Clients

This section describes how to configure Windows clients for Internet access via the WBR-3407.

The first step is to check the PC's TCP/IP settings.

The WBR-3407 uses the TCP/IP network protocol for all functions, so it is essential that the TCP/IP protocol be installed and configured on each PC.

TCP/IP Settings - Overview

If using the default WBR-3407 settings, and the default Windows TCP/IP settings, no changes need to be made.

- By default, the WBR-3407 will act as a DHCP Server, automatically providing a suitable IP Address (and related information) to each PC when the PC boots.
- For all non-Server versions of Windows, the default TCP/IP setting is to act as a DHCP client.

If using a Fixed (specified) IP address, the following changes are required:

- The *Gateway* must be set to the IP address of the WBR-3407
- The *DNS* should be set to the address provided by your ISP.

Note!

If your LAN has a Router, the LAN Administrator must re-configure the Router itself. Refer to *Chapter 8 - Advanced Setup* for details.

Checking TCP/IP Settings - Windows 9x/ME:

1. Select *Control Panel - Network*. You should see a screen like the following:

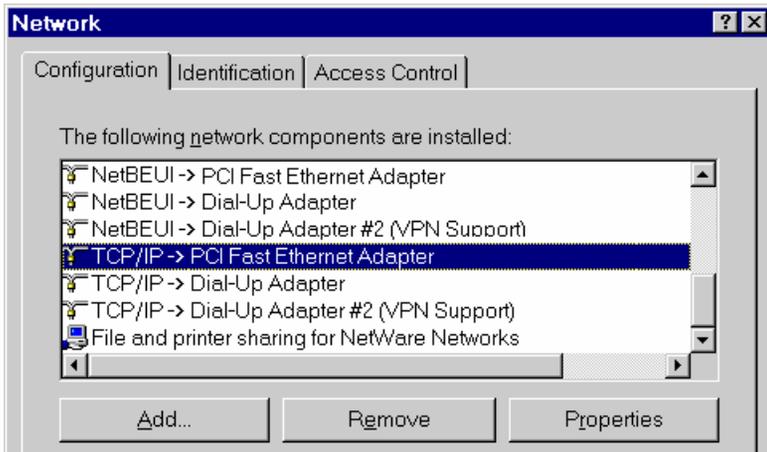

Figure 14: Network Configuration

2. Select the *TCP/IP* protocol for your network card.
3. Click on the *Properties* button. You should then see a screen like the following.

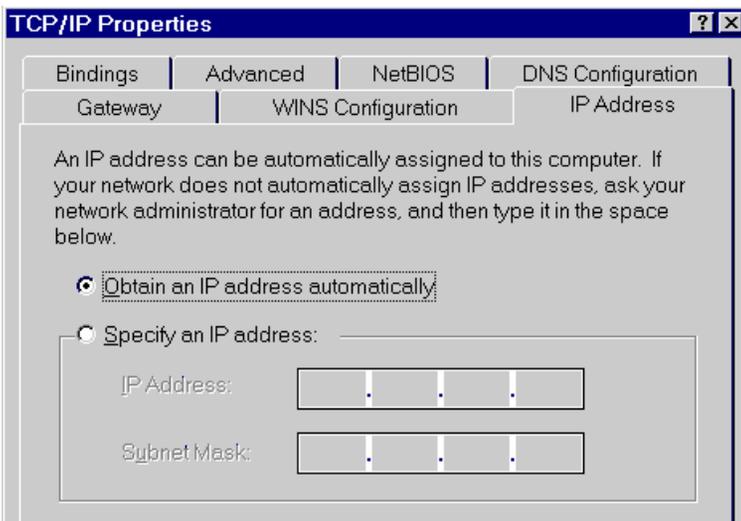

Figure 15: IP Address (Win 95)

Ensure your TCP/IP settings are correct, as follows:

Using DHCP

To use DHCP, select the radio button *Obtain an IP Address automatically*. This is the default Windows setting. **Using this is recommended.** By default, the WBR-3407 will act as a DHCP Server.

Restart your PC to ensure it obtains an IP Address from the WBR-3407.

Using "Specify an IP Address"

If your PC is already configured, check with your network administrator before making the following changes:

- On the *Gateway* tab, enter the WBR-3407's IP address in the *New Gateway* field and click *Add*, as shown below. Your LAN administrator can advise you of the IP Address they assigned to the WBR-3407.

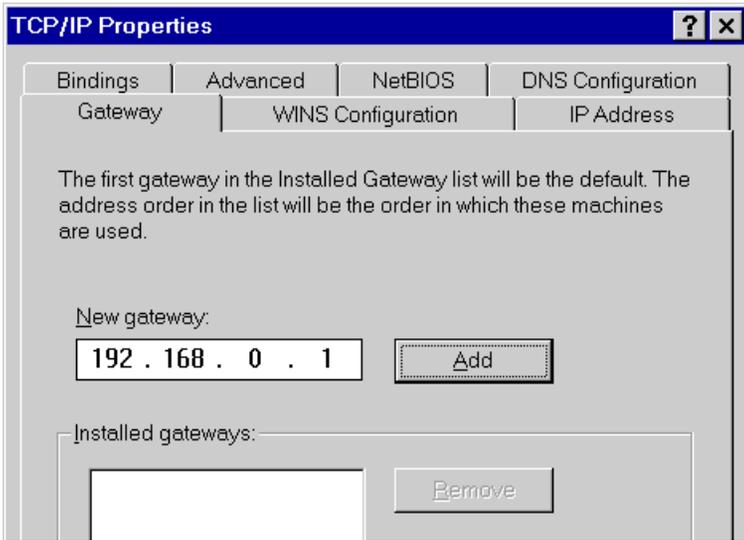

Figure 16: Gateway Tab (Win 95/98)

- On the *DNS Configuration* tab, ensure *Enable DNS* is selected. If the *DNS Server Search Order* list is empty, enter the DNS address provided by your ISP in the fields beside the *Add* button, then click *Add*.

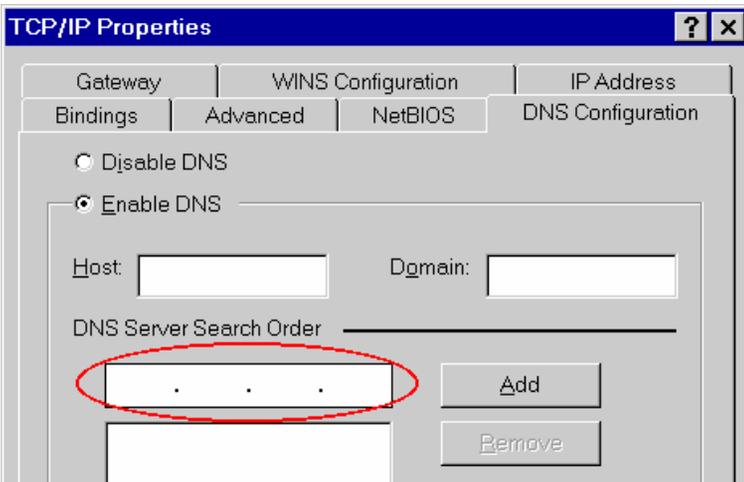

Figure 17: DNS Tab (Win 95/98)

Checking TCP/IP Settings - Windows NT4.0

1. Select *Control Panel - Network*, and, on the *Protocols* tab, select the TCP/IP protocol, as shown below.

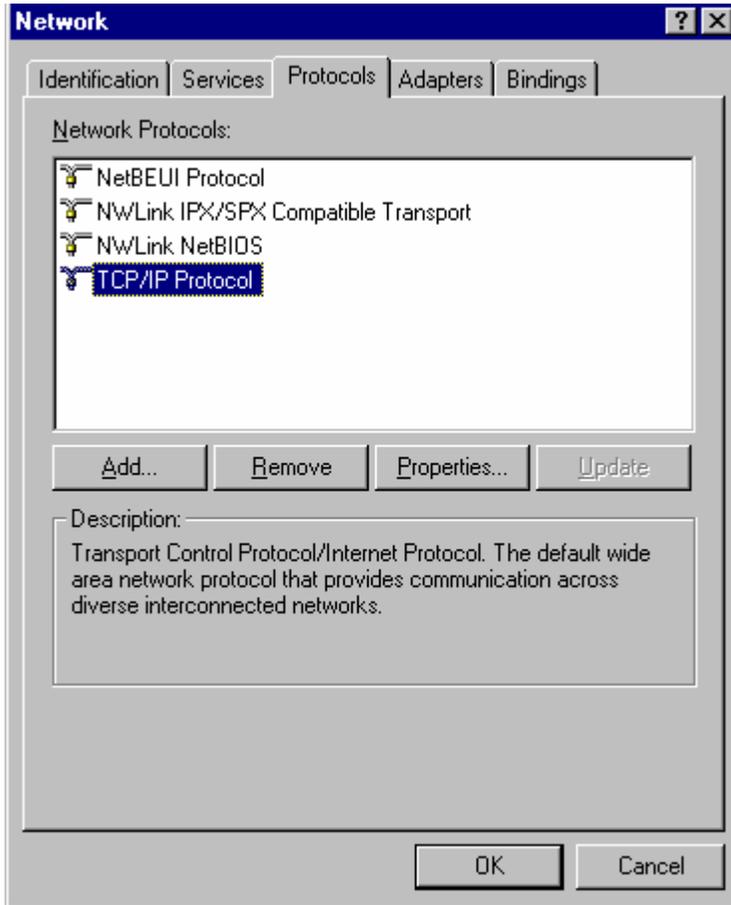

Figure 18: Windows NT4.0 - TCP/IP

2. Click the *Properties* button to see a screen like the one below.

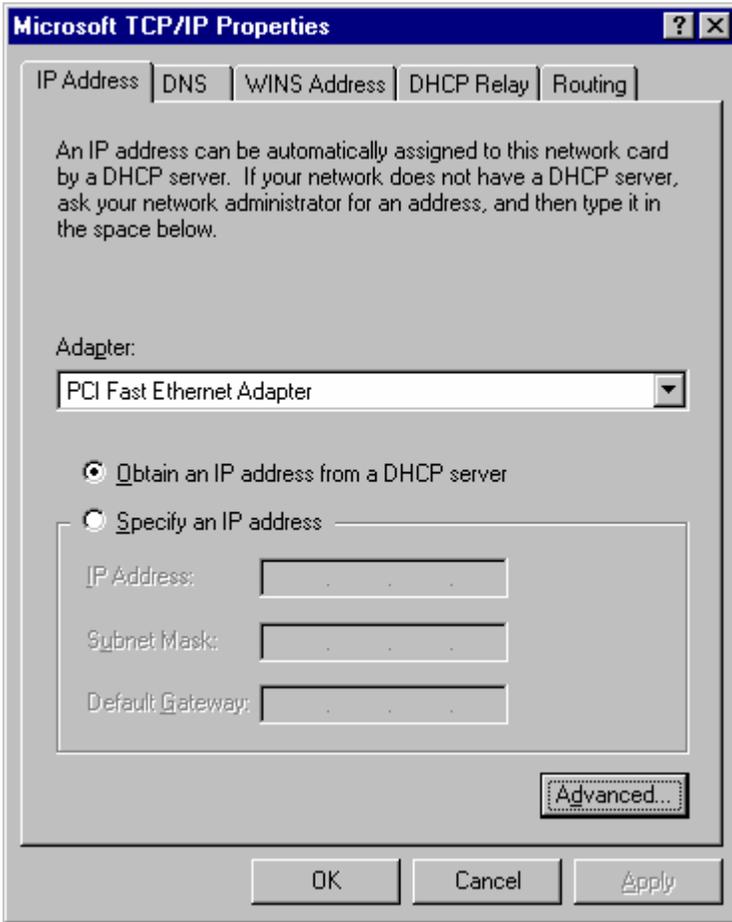

Figure 19: Windows NT4.0 - IP Address

3. Select the network card for your LAN.
4. Select the appropriate radio button - *Obtain an IP address from a DHCP Server* or *Specify an IP Address*, as explained below.

Obtain an IP address from a DHCP Server

This is the default Windows setting. **Using this is recommended.** By default, the WBR-3407 will act as a DHCP Server.

Restart your PC to ensure it obtains an IP Address from the WBR-3407.

Specify an IP Address

If your PC is already configured, check with your network administrator before making the following changes.

1. The *Default Gateway* must be set to the IP address of the WBR-3407. To set this:
 - Click the *Advanced* button on the screen above.
 - On the following screen, click the *Add* button in the *Gateways* panel, and enter the WBR-3407's IP address, as shown in Figure 20 below.
 - If necessary, use the *Up* button to make the WBR-3407 the first entry in the *Gateways* list.

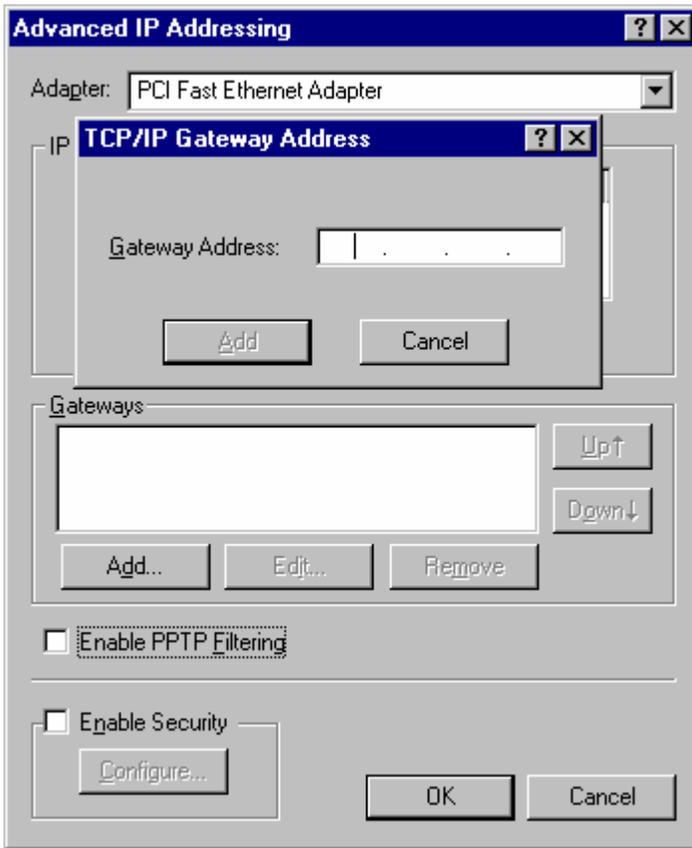

Figure 20 - Windows NT4.0 - Add Gateway

2. The DNS should be set to the address provided by your ISP, as follows:
 - Click the DNS tab.
 - On the DNS screen, shown below, click the *Add* button (under *DNS Service Search Order*), and enter the DNS provided by your ISP.

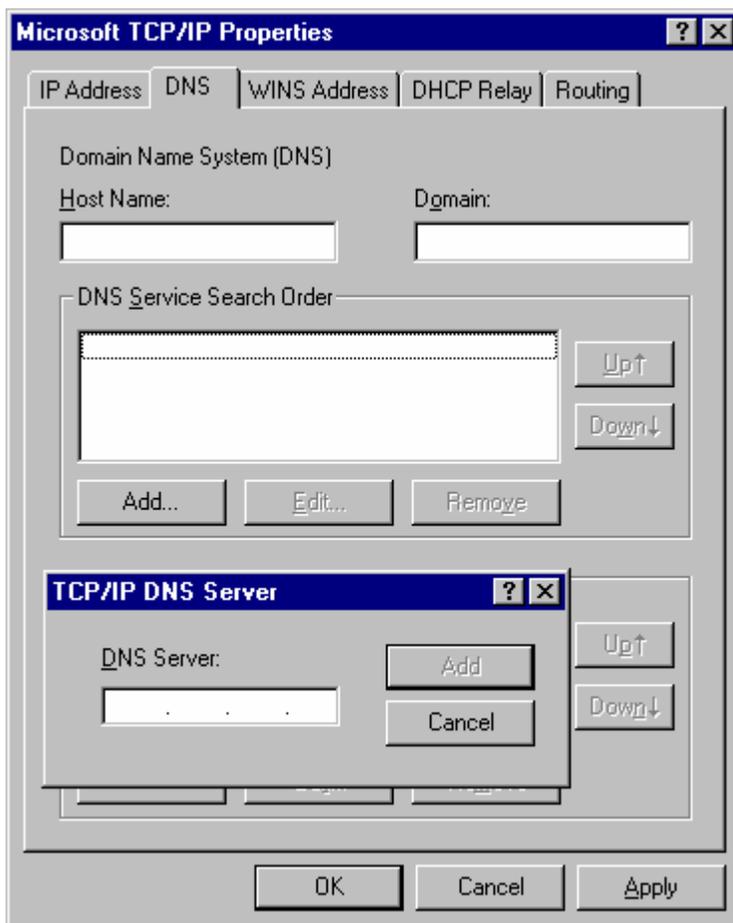

Figure 21: Windows NT4.0 - DNS

Checking TCP/IP Settings - Windows 2000:

1. Select *Control Panel - Network and Dial-up Connection*.
2. Right - click the *Local Area Connection* icon and select *Properties*. You should see a screen like the following:

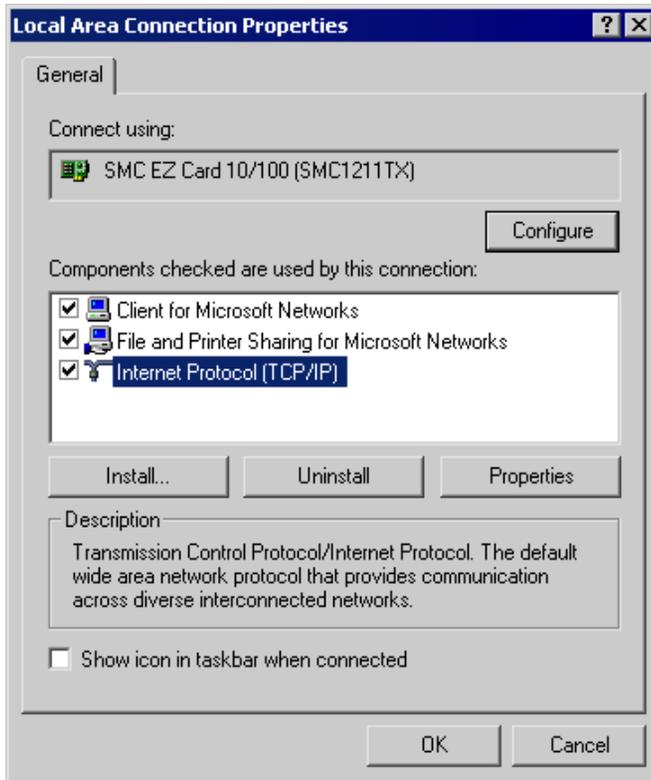

Figure 22: Network Configuration (Win 2000)

3. Select the *TCP/IP* protocol for your network card.
4. Click on the *Properties* button. You should then see a screen like the following.

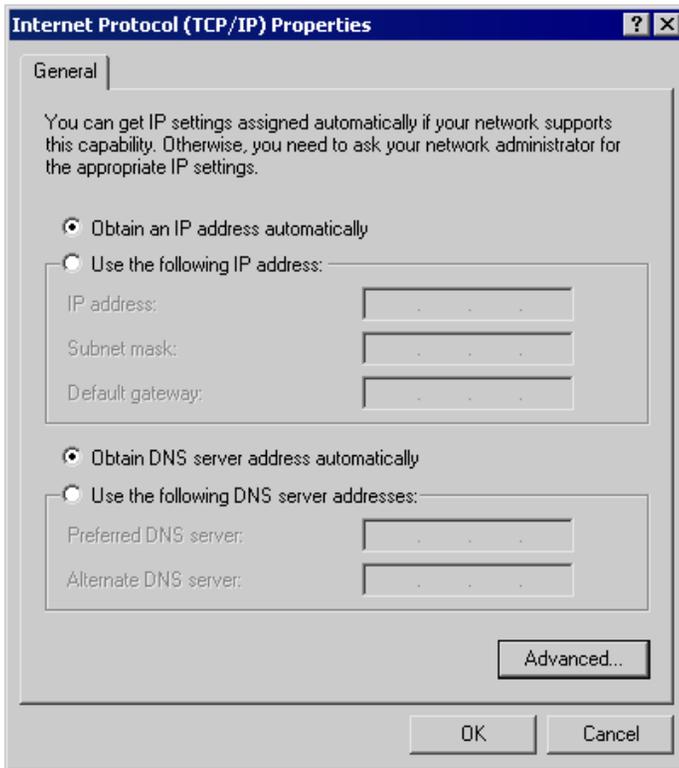

Figure 23: TCP/IP Properties (Win 2000)

5. Ensure your TCP/IP settings are correct, as described below.

Using DHCP

To use DHCP, select the radio button *Obtain an IP Address automatically*. This is the default Windows setting. **Using this is recommended.** By default, the WBR-3407 will act as a DHCP Server.

Restart your PC to ensure it obtains an IP Address from the WBR-3407.

Using a fixed IP Address ("Use the following IP Address")

If your PC is already configured, check with your network administrator before making the following changes.

- Enter the WBR-3407's IP address in the *Default gateway* field and click *OK*. (Your LAN administrator can advise you of the IP Address they assigned to the WBR-3407.)
- If the *DNS Server* fields are empty, select *Use the following DNS server addresses*, and enter the DNS address or addresses provided by your ISP, then click *OK*.

Checking TCP/IP Settings - Windows XP

1. Select *Control Panel - Network Connection*.
2. Right click the *Local Area Connection* and choose *Properties*. You should see a screen like the following:

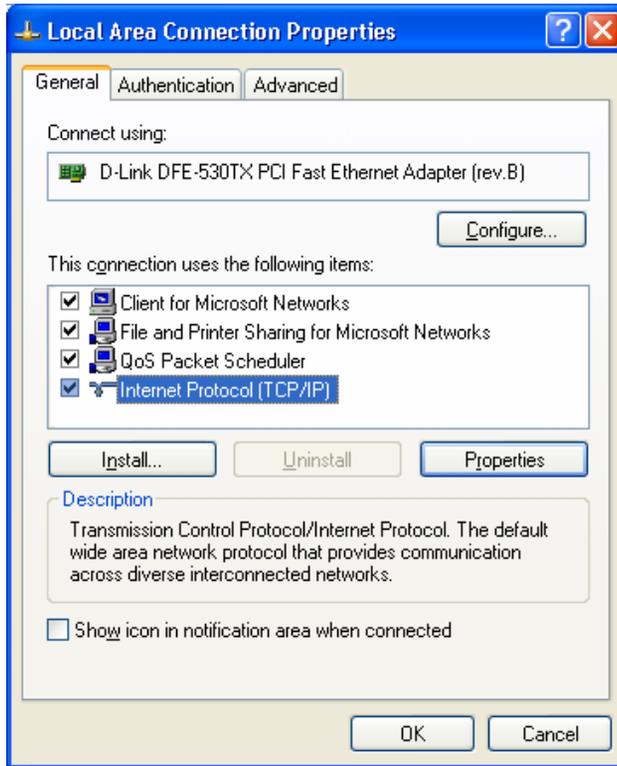

Figure 24: Network Configuration (Windows XP)

3. Select the *TCP/IP* protocol for your network card.
4. Click on the *Properties* button. You should then see a screen like the following.

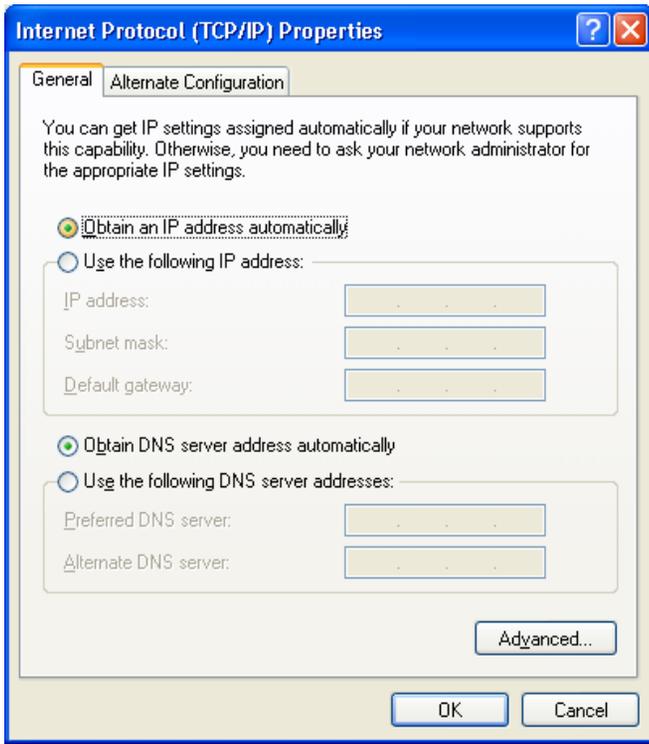

Figure 25: TCP/IP Properties (Windows XP)

5. Ensure your TCP/IP settings are correct.

Using DHCP

To use DHCP, select the radio button *Obtain an IP Address automatically*. This is the default Windows setting. **Using this is recommended.** By default, the WBR-3407 will act as a DHCP Server.

Restart your PC to ensure it obtains an IP Address from the WBR-3407.

Using a fixed IP Address ("Use the following IP Address")

If your PC is already configured, check with your network administrator before making the following changes.

- In the *Default gateway* field, enter the WBR-3407's IP address and click *OK*. Your LAN administrator can advise you of the IP Address they assigned to the WBR-3407.
- If the *DNS Server* fields are empty, select *Use the following DNS server addresses*, and enter the DNS address or addresses provided by your ISP, then click *OK*.

Internet Access

To configure your PCs to use the WBR-3407 for Internet access:

- Ensure that the DSL modem, Cable modem, or other permanent connection is functional.
- Use the following procedure to configure your Browser to access the Internet via the LAN, rather than by a Dial-up connection.

For Windows 9x/ME/2000

1. Select *Start Menu - Settings - Control Panel - Internet Options*.
2. Select the *Connection* tab, and click the *Setup* button.
3. Select "I want to set up my Internet connection manually, or I want to connect through a local area network (LAN)" and click *Next*.
4. Select "I connect through a local area network (LAN)" and click *Next*.
5. Ensure all of the boxes on the following Local area network Internet Configuration screen are **unchecked**.
6. Check the "No" option when prompted "Do you want to set up an Internet mail account now?".
7. Click *Finish* to close the Internet Connection Wizard.
Setup is now completed.

For Windows XP

1. Select *Start Menu - Control Panel - Network and Internet Connections*.
2. Select *Set up or change your Internet Connection*.
3. Select the *Connection* tab, and click the *Setup* button.
4. Cancel the pop-up "Location Information" screen.
5. Click *Next* on the "New Connection Wizard" screen.
6. Select "Connect to the Internet" and click *Next*.
7. Select "Set up my connection manually" and click *Next*.
8. Check "Connect using a broadband connection that is always on" and click *Next*.
9. Click *Finish* to close the New Connection Wizard.
Setup is now completed.

Accessing AOL

To access AOL (America On Line) through the WBR-3407, the *AOL for Windows* software must be configured to use TCP/IP network access, rather than a dial-up connection. The configuration process is as follows:

- Start the *AOL for Windows* communication software. Ensure that it is Version 2.5, 3.0 or later. This procedure will not work with earlier versions.
- Click the *Setup* button.
- Select *Create Location*, and change the location name from "New Locality" to "WBR-3407".
- Click *Edit Location*. Select *TCP/IP* for the *Network* field. (Leave the *Phone Number* blank.)
- Click *Save*, then *OK*.
Configuration is now complete.
- Before clicking "Sign On", always ensure that you are using the "WBR-3407" location.

Macintosh Clients

From your Macintosh, you can access the Internet via the WBR-3407. The procedure is as follows.

1. Open the TCP/IP Control Panel.
2. Select *Ethernet* from the *Connect via* pop-up menu.
3. Select *Using DHCP Server* from the *Configure* pop-up menu. The DHCP Client ID field can be left blank.
4. Close the TCP/IP panel, saving your settings.

Note:

If using manually assigned IP addresses instead of DHCP, the required changes are:

- Set the *Router Address* field to the WBR-3407's IP Address.
- Ensure your DNS settings are correct.

Linux Clients

To access the Internet via the WBR-3407, it is only necessary to set the WBR-3407 as the "Gateway".

Ensure you are logged in as "root" before attempting any changes.

Fixed IP Address

By default, most Unix installations use a fixed IP Address. If you wish to continue using a fixed IP Address, make the following changes to your configuration.

- Set your "Default Gateway" to the IP Address of the WBR-3407.
- Ensure your DNS (Name server) settings are correct.

To act as a DHCP Client (recommended)

The procedure below may vary according to your version of Linux and X -windows shell.

1. Start your X Windows client.
2. Select *Control Panel - Network*
3. Select the "Interface" entry for your Network card. Normally, this will be called "eth0".
4. Click the *Edit* button, set the "protocol" to "DHCP", and save this data.
5. To apply your changes
 - Use the "Deactivate" and "Activate" buttons, if available.
 - OR, restart your system.

Other Unix Systems

To access the Internet via the WBR-3407:

- Ensure the "Gateway" field for your network card is set to the IP Address of the WBR-3407.
- Ensure your DNS (Name Server) settings are correct.

Wireless Station Configuration

This section applies to all Wireless stations wishing to use the WBR-3407's Access Point, regardless of the operating system which is used on the client.

To use the WBR3407 in the WBR-3407, each Wireless Station must have compatible settings, as follows:

| | |
|--------------------------|--|
| Mode | The mode must be set to <i>Infrastructure</i> (rather than Ad-hoc) Access points only operate in <i>Infrastructure</i> mode. |
| SSID (ESSID) | This must match the value used on the WBR-3407. The default value is wireless . Note! The SSID is case sensitive. |
| Wireless Security | By default, Wireless security on the WBR-3407 is disabled . <ul style="list-style-type: none"> • If WEP or WPA-PSK is enabled on the WBR-3407, each station must use the same settings as the WBR-3407. • If WPA-802.1x is enabled, each station must obtain a certificate for authentication. See the following section for details. |

Using WPA-802.1x - Overview

802.1x mode provides greater security and centralized management, but it is more complex to configure.

Wireless Station Configuration

For each of the following items, each Wireless Station must have the same settings as the WBR3407.

| | |
|------------------------------|---|
| 802.1x Authentication | Each client must obtain a Certificate which is used for authentication for the Radius Server. |
| 802.1x Encryption | Typically, EAP-TLS is used. This is a dynamic key system, so keys do NOT have to be entered on each Wireless station. |

Radius Server Configuration

If using **WPA-802.1x** mode, the Radius Server on your network must be configured as follow:

- It must provide and accept **Certificates** for user authentication.
- There must be a **Client Login** for the WBR3407 itself.
 - The WBR3407 will use its Default Name as its Client Login name.
 - The *Shared Key*, set on the *Security* Screen of the Access Point, must match the *Shared Secret* value on the Radius Server.
- **Encryption** settings must be correct.

802.1x Server Setup (Windows 2000 Server)

This section describes using *Microsoft Internet Authentication Server* as the Radius Server, since it is the most common Radius Server available that supports the EAP-TLS authentication method.

The following services on the Windows 2000 Domain Controller (PDC) are also required:

- dhcpd
- dns
- rras
- webservr (IIS)
- Radius Server (Internet Authentication Service)
- Certificate Authority

Windows 2000 Domain Controller Setup

1. Run *dcpromo.exe* from the command prompt.
2. Follow all of the default prompts, ensure that DNS is installed and enabled during installation.

Services Installation

1. Select the Control Panel - Add/Remove Programs.
2. Click *Add/Remove Windows Components* from the left side.
3. Ensure that the following components are activated (selected):
 - *Certificate Services*. After enabling this, you will see a warning that the computer cannot be renamed and joined after installing certificate services. Select *Yes* to select certificate services and continue
 - *World Wide Web Server*. Select *World Wide Web Server* on the *Internet Information Services (IIS)* component.
 - From the *Networking Services* category, select *Dynamic Host Configuration Protocol (DHCP)*, and *Internet Authentication Service* (DNS should already be selected and installed).

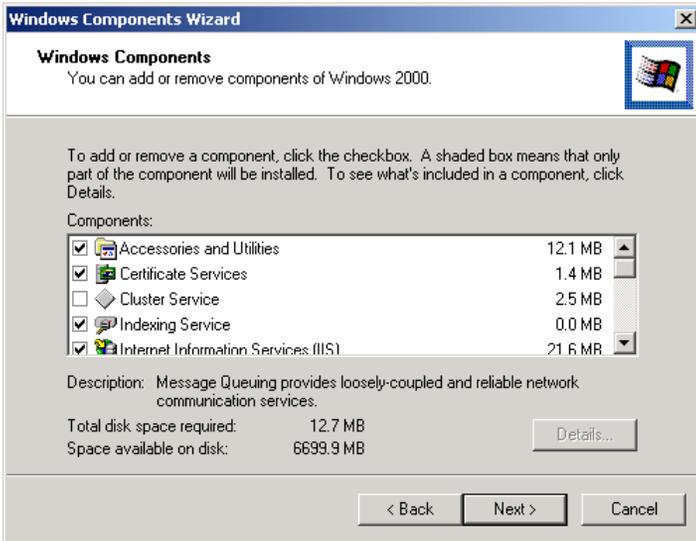

Figure 26: Components Screen

- 4. Click *Next*.
- 5. Select the *Enterprise root CA*, and click *Next*.

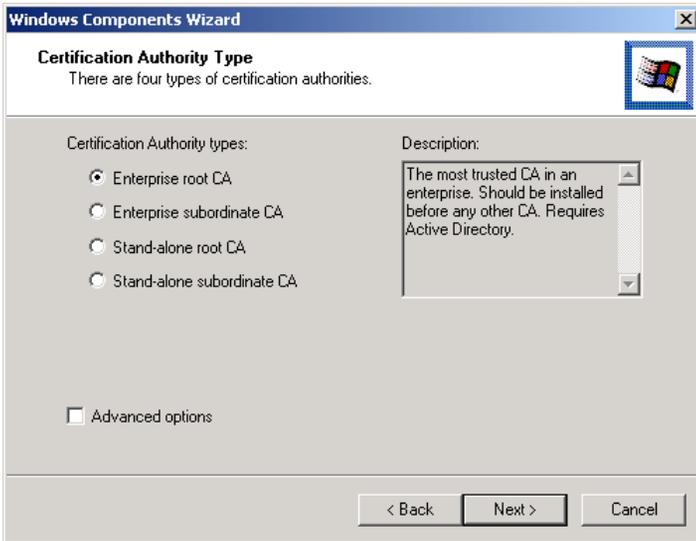

Figure 27: Certification Screen

- 6. Enter the information for the Certificate Authority, and click *Next*.

Windows Components Wizard

CA Identifying Information
Enter information to identify this CA

CA name:

Organization:

Organizational unit:

City:

State or province: Country/region:

E-mail:

CA description:

Valid for: Years Expires:

< Back Next > Cancel

Figure 28: CA Screen

7. Click *Next* if you don't want to change the CA's configuration data.
8. Installation will warn you that Internet Information Services are running, and must be stopped before continuing. Click *Ok*, then *Finish*.

DHCP server configuration

1. Click on the Start - Programs - Administrative Tools - DHCP
2. Right-click on the server entry as shown, and select *New Scope*.

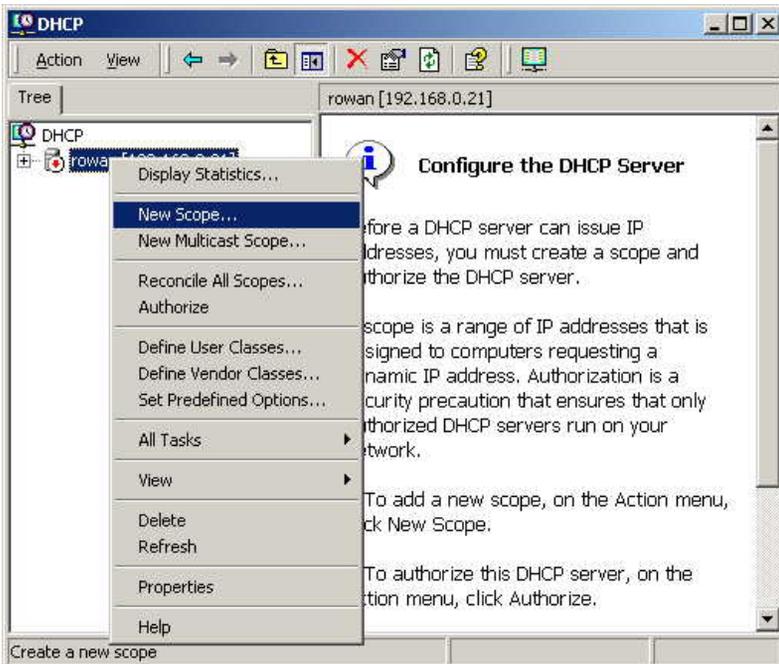

Figure 29: DHCP Screen

3. Click *Next* when the New Scope Wizard Begins.
4. Enter the name and description for the scope, click *Next*.
5. Define the IP address range. Change the subnet mask if necessary. Click *Next*.

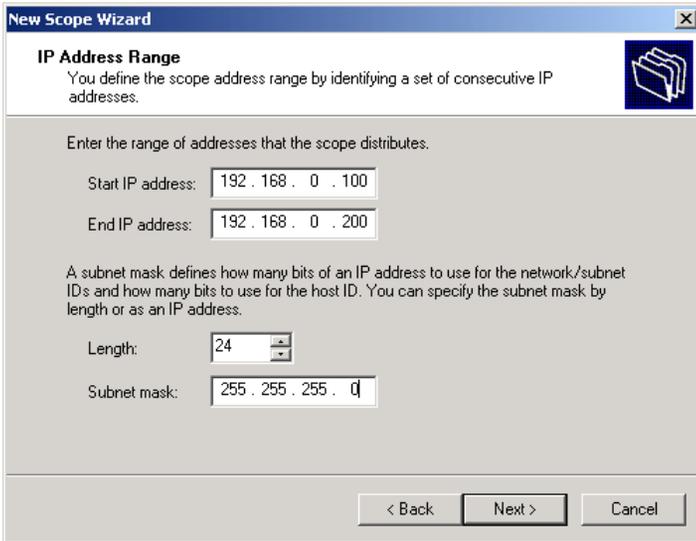

Figure 30:IP Address Screen

6. Add exclusions in the address fields if required. If no exclusions are required, leave it blank. Click *Next*.
7. Change the *Lease Duration* time if preferred. Click *Next*.
8. Select *Yes, I want to configure these options now*, and click *Next*.
9. Enter the router address for the current subnet. The router address may be left blank if there is no router. Click *Next*.
10. For the Parent domain, enter the domain you specified for the domain controller setup, and enter the server's address for the IP address. Click *Next*.

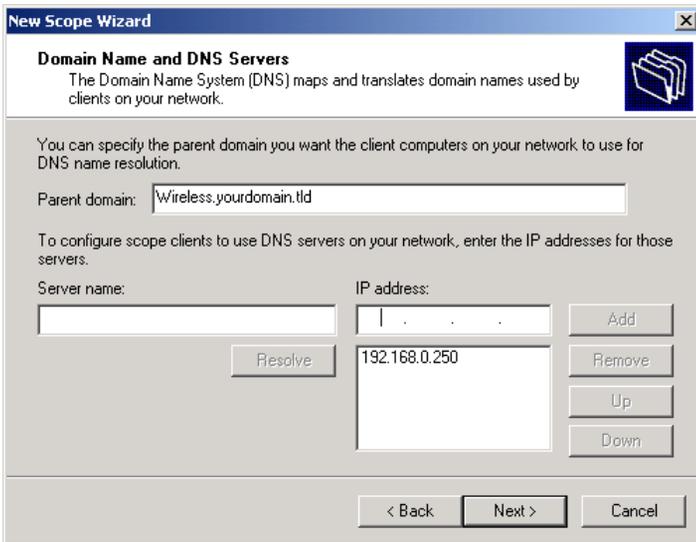

Figure 31: DNS Screen

11. If you don't want a WINS server, just click *Next*.
12. Select *Yes, I want to activate this scope now*. Click *Next*, then *Finish*.
13. Right-click on the server, and select *Authorize*. It may take a few minutes to complete.

Certificate Authority Setup

1. Select Start - Programs - Administrative Tools - Certification Authority.
2. Right-click *Policy Settings*, and select *New - Certificate to Issue*.

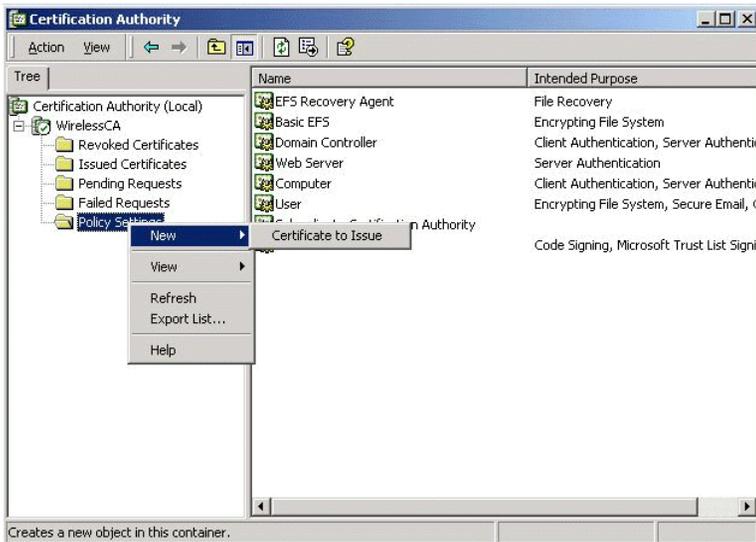

Figure 32: Certificate Authority Screen

3. Select *Authenticated Session* and *Smartcard Logon* (select more than one by holding down the Ctrl key). Click *OK*.

Figure 33: Template Screen

4. Select Start - Programs - Administrative Tools - Active Directory Users and Computers.
5. Right-click on your active directory domain, and select *Properties*.

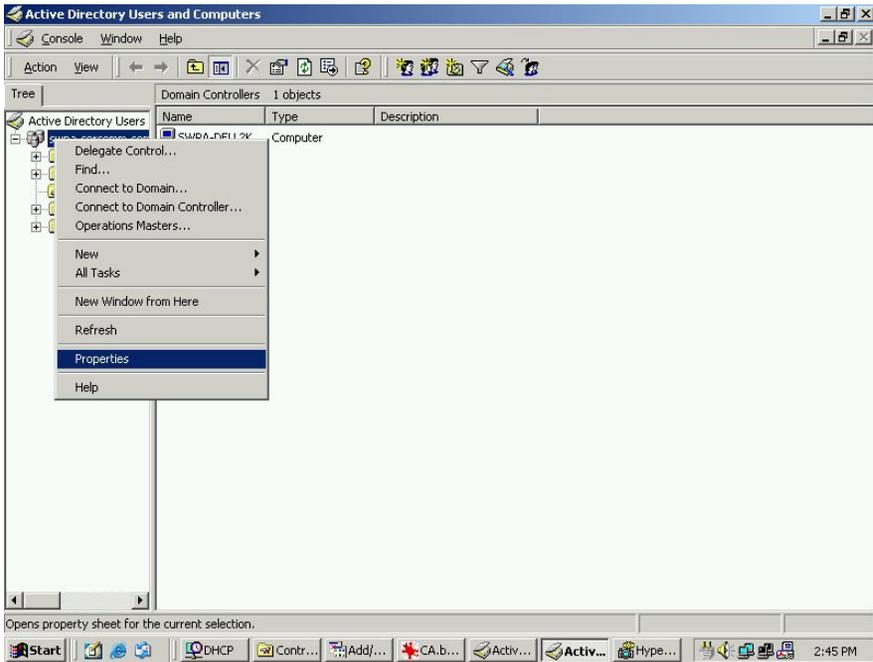

Figure 34: Active Directory Screen

- 6. Select the *Group Policy* tab, choose *Default Domain Policy* then click *Edit*.

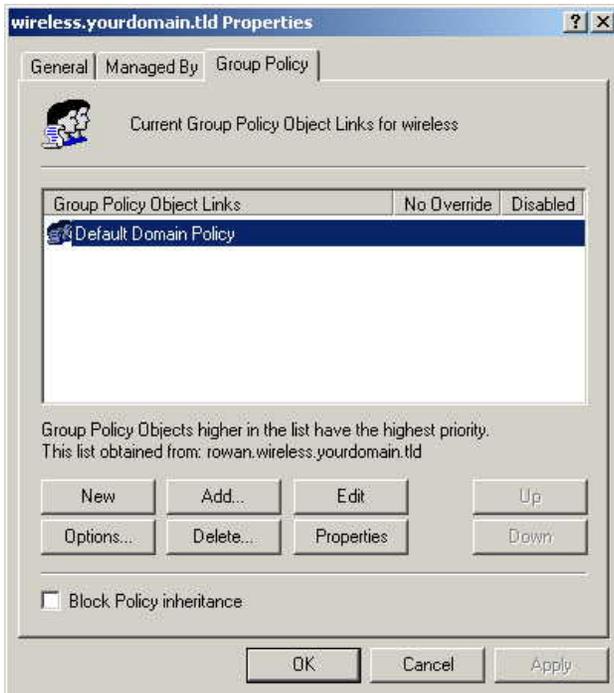

Figure 35: Group Policy Tab

- 7. Select *Computer Configuration - Windows Settings - Security Settings - Public Key Policies*, right-click *Automatic Certificate Request Settings - New - Automatic Certificate Request*.

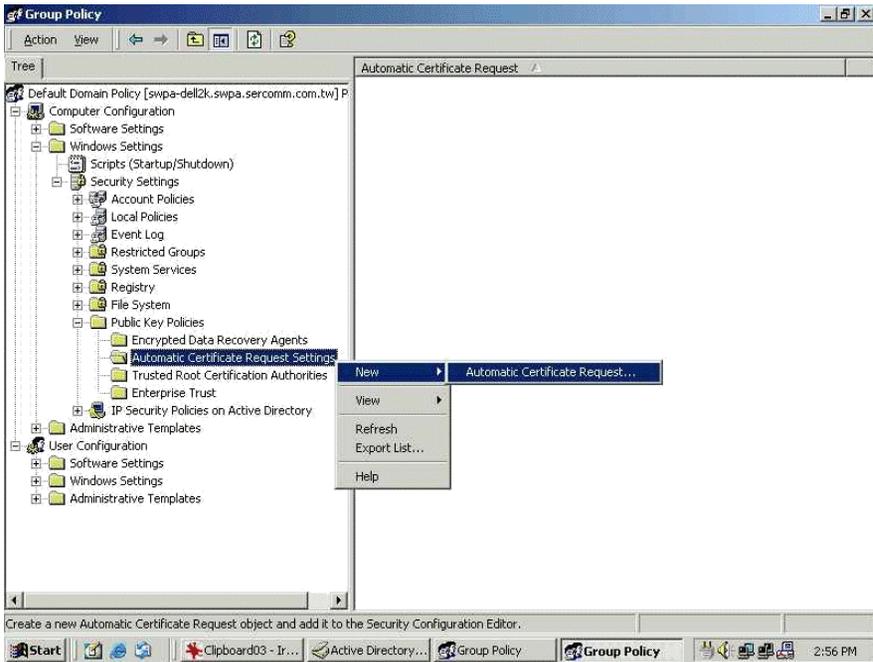

Figure 36: Group Policy Screen

8. When the Certificate Request Wizard appears, click *Next*.
9. Select *Computer*, then click *Next*.

Figure 37: Certificate Template Screen

10. Ensure that your certificate authority is checked, then click *Next*.
11. Review the policy change information and click *Finish*.
12. Click *Start - Run*, type `cmd` and press enter.
Enter `secdit /refreshpolicy machine_policy`
This command may take a few minutes to take effect.

Internet Authentication Service (Radius) Setup

1. Select Start - Programs - Administrative Tools - Internet Authentication Service
2. Right-click on *Clients*, and select *New Client*.

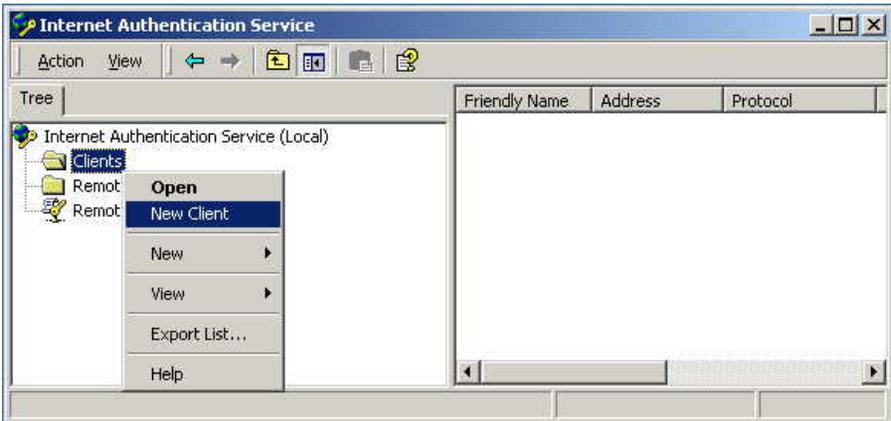

Figure 38: Service Screen

3. Enter a name for the access point, click *Next*.
4. Enter the address of the WBR3407, and set the shared secret, as entered on the WBR3407.
5. Click *Finish*.
6. Right-click on *Remote Access Policies*, select *New Remote Access Policy*.
7. Assuming you are using EAP-TLS, name the policy `eap-tls`, and click *Next*.
8. Click *Add...*
If you don't want to set any restrictions and a condition is required, select *Day-And-Time-Restrictions*, and click *Add...*

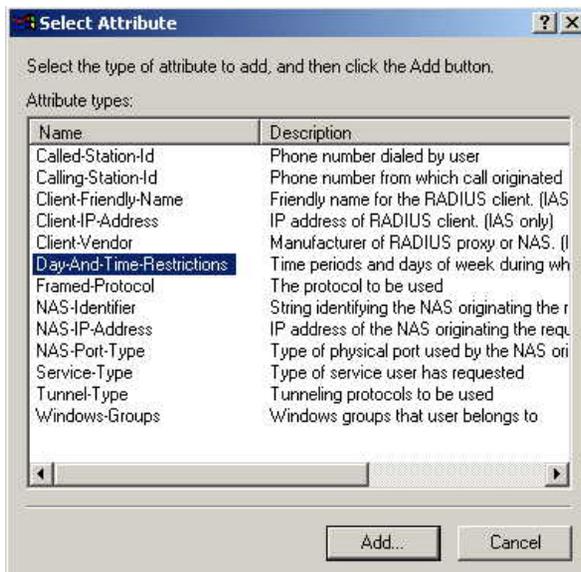

Figure 39: Attribute Screen

9. Click *Permitted*, then *OK*. Select *Next*.
10. Select *Grant remote access permission*. Click *Next*.

11. Click *Edit Profile...* and select the *Authentication* tab. Enable *Extensible Authentication Protocol*, and select *Smart Card or other Certificate*. Deselect other authentication methods listed. Click *OK*.

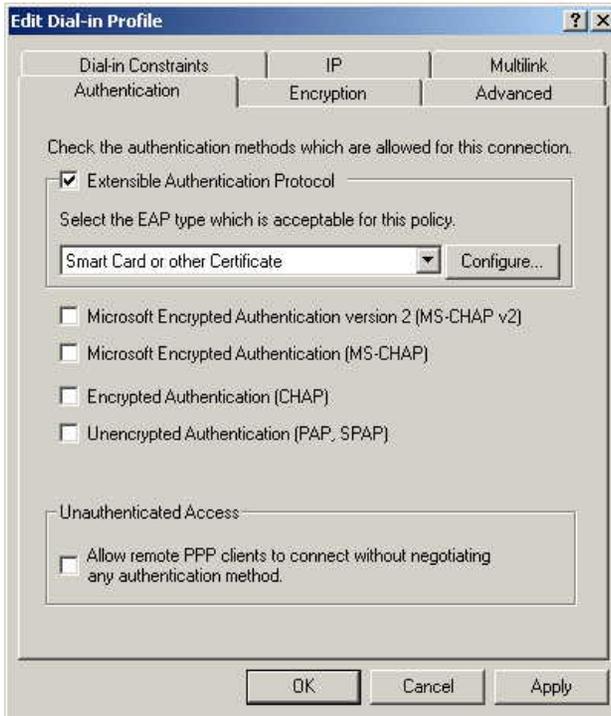

Figure 40: Authentication Screen

12. Select *No* if you don't want to view the help for EAP. Click *Finish*.

Remote Access Login for Users

1. Select Start - Programs - Administrative Tools- Active Directory Users and Computers.
2. Double click on the user who you want to enable.
3. Select the *Dial-in* tab, and enable *Allow access*. Click *OK*.

Figure 41: Dial-in Screen

802.1x Client Setup on Windows XP

Windows XP ships with a complete 802.1x client implementation. If using Windows 2000, you can install SP3 (Service Pack 3) to gain the same functionality.

If you don't have either of these systems, you must use the 802.1x client software provided with your wireless adapter. Refer to your vendor's documentation for setup instructions.

The following instructions assume that:

- You are using Windows XP
- You are connecting to a Windows 2000 server for authentication.
- You already have a login (User name and password) on the Windows 2000 server.

Client Certificate Setup

1. Connect to a network which doesn't require port authentication.
2. Start your Web Browser. In the *Address* box, enter the IP address of the Windows 2000 Server, followed by */certsrv*
e.g `http://192.168.0.2/certsrv`
3. You will be prompted for a user name and password. Enter the *User name* and *Password* assigned to you by your network administrator, and click *OK*.

Figure 42: Connect Screen

4. On the first screen (below), select *Request a certificate*, click *Next*.

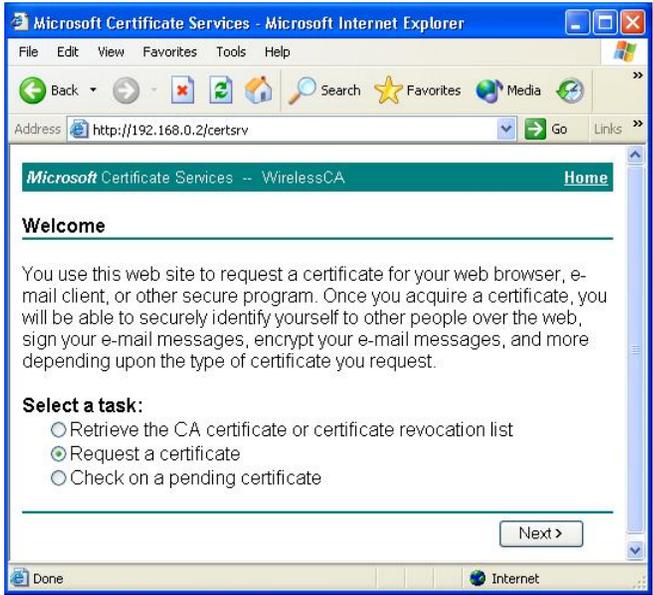

Figure 43: Wireless CA Screen

5. Select *User certificate request* and select *User Certificate*, then click *Next*.

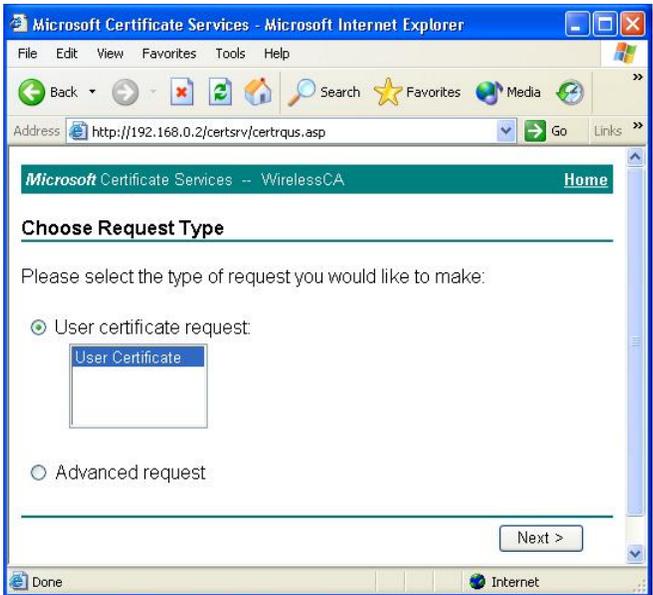

Figure 44: Request Type Screen

6. Click *Submit*.

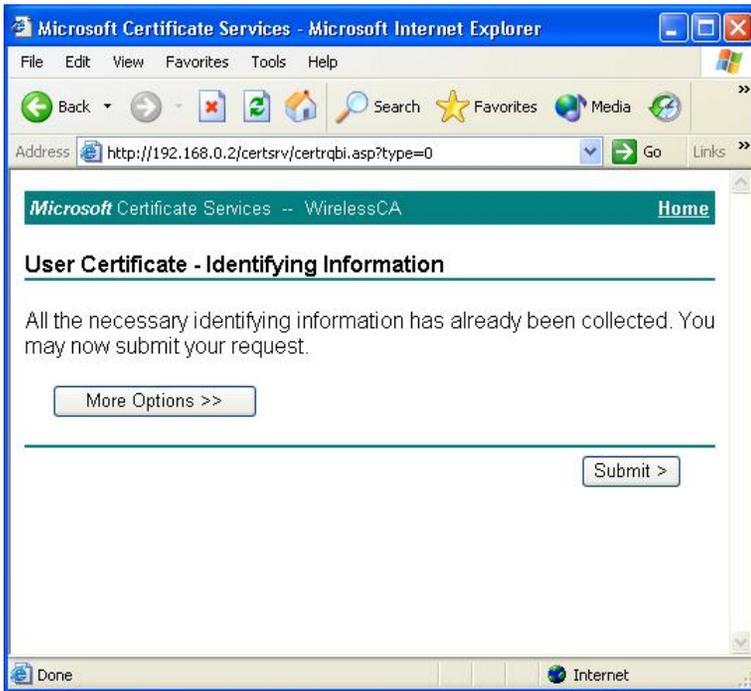

Figure 45: Identifying Information Screen

7. A message will be displayed, then the certificate will be returned to you. Click *Install this certificate*.

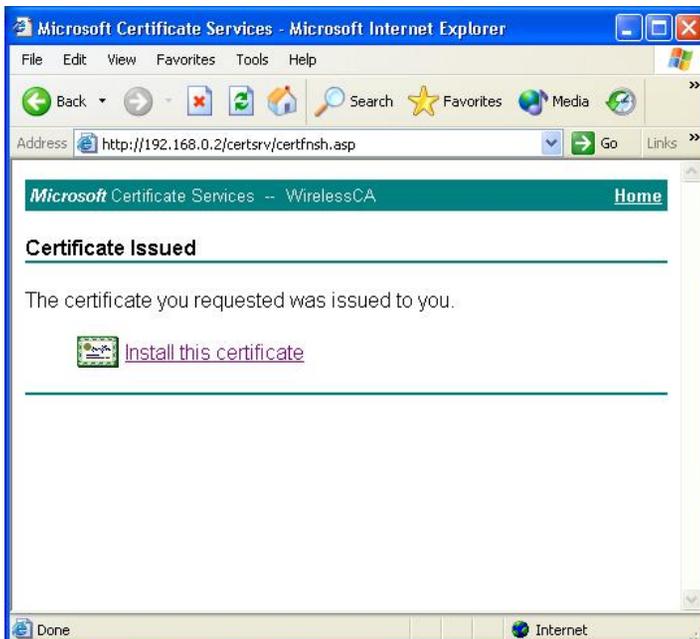

Figure 46: Certificate Issued Screen

8. . You will receive a confirmation message. Click *Yes*.

Figure 47: Root Certificate Screen

9. Certificate setup is now complete.

802.1x Authentication Setup

1. Open the properties for the wireless connection, by selecting *Start - Control Panel - Network Connections*.
2. Right Click on the *Wireless Network Connection*, and select *Properties*.
3. Select the *Authentication* Tab, and ensure that *Enable network access control using IEEE 802.1X* is selected, and *Smart Card or other Certificate* is selected from the EAP type.

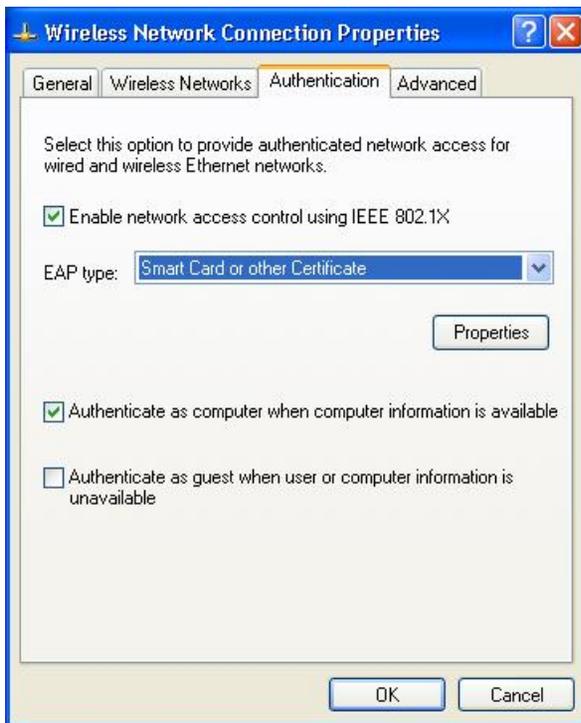

Figure 48: Authentication Tab

Encryption Settings

The Encryption settings must match the APs (Access Points) on the Wireless network you wish to join.

- Windows XP will detect any available Wireless networks, and allow you to configure each network independently.

- Your network administrator can advise you of the correct settings for each network. 802.1x networks typically use EAP-TLS. This is a dynamic key system, so there is no need to enter key values.

Enabling Encryption

To enable encryption for a wireless network, follow this procedure:

- Click on the *Wireless Networks* tab.

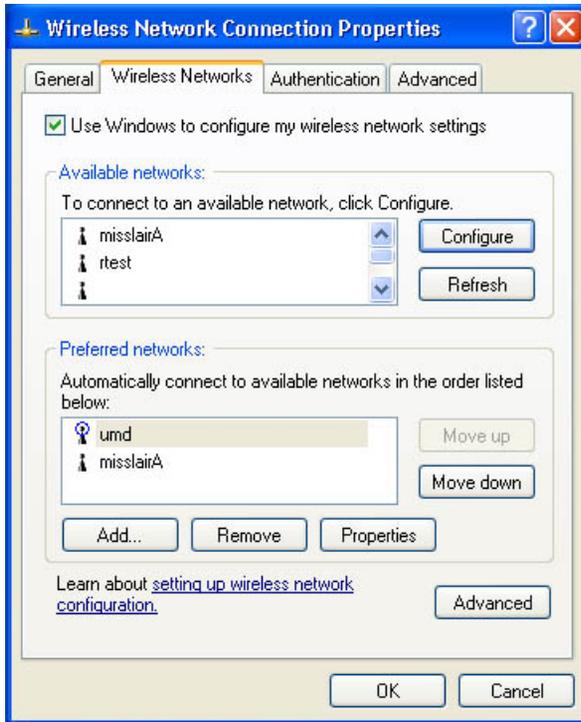

Figure 49: Wireless Networks Screen

- Select the wireless network from the *Available Networks* list, and click *Configure*.
- Select and enter the correct values, as advised by your Network Administrator. For example, to use EAP-TLS, you would enable *Data encryption*, and click the checkbox for the setting *The key is provided for me automatically*, as shown below.

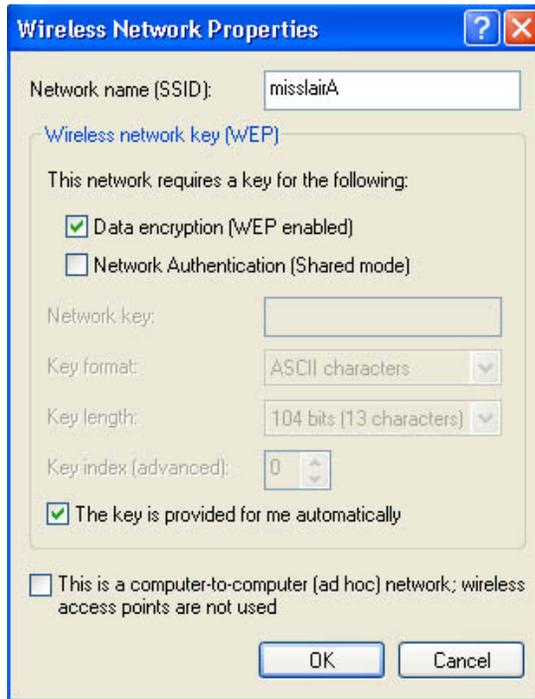

Figure 50: Properties Screen

Setup for Windows XP and 802.1x client is now complete.

Chapter 5

Operation and Status

This Chapter details the operation of the WBR-3407 and the status screens.

Operation

Once both the WBR-3407 and the PCs are configured, operation is automatic.

However, there are some situations where additional Internet configuration may be required. Refer to *Chapter 6 - Advanced Features* for further details.

Status Screen

Use the *Status* link on the main menu to view this screen.

The screenshot shows the 'Status' screen with a large 'S' logo and the word 'tatus'. The screen is divided into four sections: Internet, LAN, Wireless, and System. Each section contains a list of status information. At the bottom, there are three buttons: 'Attached Devices', 'Refresh Screen', and 'Help'.

| Section | Parameter | Value |
|----------|-----------------------------|-------------------|
| Internet | Modem Status | Connecting |
| | DownStream Connection Speed | 0 kbps |
| | UpStream Connection Speed | 0 kbps |
| | Connection Method: | PPPOA |
| | Internet Connection: | Idle |
| | Internet IP Address: | --- |
| LAN | IP Address: | 192.168.0.1 |
| | Network Mask: | 255.255.255.0 |
| | DHCP Server: | On |
| | MAC Address | 00:c0:02:ff:96:62 |
| Wireless | Name (SSID) | Wireless |
| | Region | Europe |
| | Channel | 3 |
| | Wireless AP | enable |
| | Broadcast Name | enable |
| System | Device Name: | WBR-3407A |
| | Firmware Version: | 0.01.02 |

Buttons: Attached Devices, Refresh Screen, Help

Figure 51: Status Screen

Data - Status Screen

| Internet | |
|------------------------------------|---|
| Modem Status | This indicates the status of the ADSL modem component. |
| DownStream Connection Speed | If connected, displays the speed for the DownStream (download) ADSL Connection. |
| UpStream Connection Speed | If connected, displays the speed for the UpStream (upload) ADSL Connection. |
| Connection Method | This indicates the current connection method, as set in the <i>Setup Wizard</i> . |
| Internet Connection | <p>This indicates the current status of the Internet Connection</p> <ul style="list-style-type: none"> • Active - Connection exists • Idle - No current connection, but no error has been detected. This condition normally arises when an idle connection is automatically terminated. • Failed - The connection was terminated abnormally. This could be caused by Modem failure, or the loss of the connection to the ISP's server. <p>If there is an error, you can click the "Connection Details" button to find out more information.</p> |
| Internet IP Address | This IP Address is allocated by the ISP (Internet Service Provider). If using a dynamic IP address, and no connection currently exists, this information is unavailable. |
| Connection Details | Click this button to open a sub-window and view a detailed description of the current connection. Depending on the type of connection, a "log" may also be available. |
| LAN | |
| IP Address | The IP Address of the WBR-3407. |
| Network Mask | The Network Mask (Subnet Mask) for the IP Address above. |
| DHCP Server | This shows the status of the DHCP Server function. The value will be "Enabled" or "Disabled". |
| MAC Address | This shows the MAC Address for the WBR-3407, as seen on the LAN interface. |
| Wireless | |
| Name (SSID) | If using an ESS (Extended Service Set, with multiple access points) this ID is called an ESSID (Extended Service Set Identifier). |
| Region | The current region, as set on the Wireless screen. |
| Channel | This shows the Channel currently used, as set on the Wireless screen. |
| Wireless AP | This indicates whether or not the WBR3407 feature is enabled. |
| Broadcast Name | This indicates whether or not the SSID is Broadcast. This setting is on the Wireless screen. |

| System | |
|---------------------------|--|
| Device Name | The current name of the WBR-3407. This is also the "hostname" provided to ISPs who request this information. |
| Firmware Version | The version of the current firmware installed. |
| Buttons | |
| Connection Details | Click this button to open a sub-window and view a detailed description of the current connection. |
| Attached Devices | This will open a sub-window, showing all LAN and Wireless devices currently on the network. |
| Refresh Screen | Update the data displayed on screen. |

Connection Status - PPPoE & PPPoA

If using PPPoE (PPP over Ethernet) or PPPoA (PPP over ATM), a screen like the following example will be displayed when the "Connection Details" button is clicked.

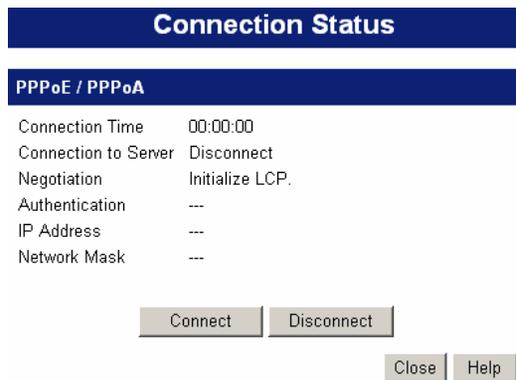

Figure 52: PPPoE Status Screen

Data – PPPoE/PPPoA Screen

| | |
|--------------------------|--|
| Connection Time | This indicates how long the current connection has been established. |
| PPPoE Link Status | This indicates whether or not the connection is currently established. <ul style="list-style-type: none"> • If the connection does not exist, the "Connect" button can be used to establish a connection. • If the connection currently exists, the "Disconnect" button can be used to break the connection. |
| Negotiation | This indicates the status of the PPPoE Server login. |
| IP Address | The IP Address of this device, as seen by Internet users. This address is allocated by your ISP (Internet Service Provider). |
| Network Mask | The Network Mask associated with the IP Address above. |

| Buttons | |
|-------------------|---|
| Connect | If not connected, establish a connection to your ISP. |
| Disconnect | If connected to your ISP, hang up the connection. |
| Close | Close this window. |

Connection Details - Dynamic IP Address

If your access method is "Direct" (no login), with a Dynamic IP address, a screen like the following example will be displayed when the "Connection Details" button is clicked.

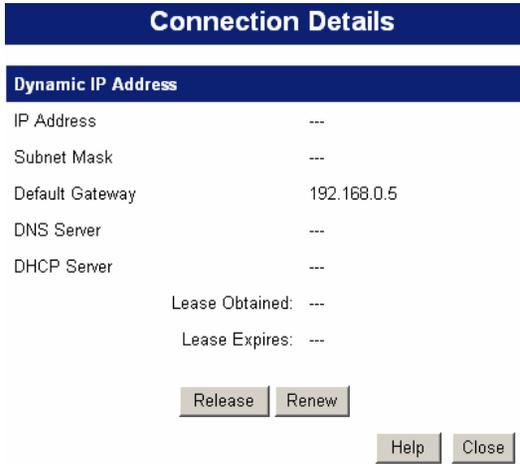

Figure 53: Connection Details - Fixed/Dynamic IP Address

Data - Dynamic IP address

| Internet | |
|---|---|
| IP Address | The current IP Address of this device, as seen by Internet users. This address is allocated by your ISP (Internet Service Provider). |
| Network Mask | The Network Mask associated with the IP Address above. |
| Default Gateway | The IP address of the remote Gateway or Router associated with the IP Address above. |
| DHCP Server | The IP address of your ISP's DHCP Server. |
| DNS Server | The IP address of the Domain Name Server which is currently used. |
| Lease Obtained Lease Expires | This indicates when the current IP address was obtained, and how long before this IP address allocation (the DHCP lease) expires. |
| Buttons | |
| Release | If an IP Address has been allocated to the WBR-3407 (by the ISP's DHCP Server, clicking the "Release" button will break the connection and release the IP Address. |
| Renew | If the ISP's DHCP Server has NOT allocated an IP Address for the WBR-3407, clicking the "Renew" button will attempt to re-establish the connection and obtain an IP Address from the ISP's DHCP |

| | |
|--------------|--------------------|
| | Server. |
| Close | Close this window. |

Connection Details - Fixed IP Address

If your access method is "Direct" (no login), with a fixed IP address, a screen like the following example will be displayed when the "Connection Details" button is clicked.

| Connection Status | |
|-------------------|-----------------|
| Fixed IP Address | |
| IP Address | 192.168.0.10 |
| Subnet Mask | 255.255.255.0 |
| Default Gateway | 192.168.0.5 |
| DNS Server | 254.255.255.254 |

Figure 54: Connection Details - Fixed/Dynamic IP Address

Data - Fixed IP address Screen

| Internet | |
|------------------------|--|
| IP Address | The IP Address of this device, as seen by Internet users. This address is allocated by your ISP (Internet Service Provider). |
| Network Mask | The Network Mask associated with the IP Address above. |
| Default Gateway | The IP Address of the remote Gateway or Router associated with the IP Address above. |
| DNS Server | The IP Address of the Domain Name Server which is currently used. |

Chapter 6

Advanced Features

6

This Chapter explains when and how to use the WBR-3407's "Advanced" Features.

Overview

The following advanced features are provided:

- Internet:
 - DMZ
 - URL filter
- Dynamic DNS
- Firewall Rules
- Firewall Services
- Schedule
- Virtual Servers

Internet

This screen provides access to the DMZ and URL Filter features.

Figure 55: Advanced Internet Screen

DMZ

This feature, if enabled, allows the DMZ computer on your LAN to be exposed to all users on the Internet.

- This allows almost any application to be used on the "DMZ PC".
- The "DMZ PC" will receive all "Unknown" connections and data.
- If the DMZ feature is enabled, you must select the PC to be used as the "DMZ PC".

The "DMZ PC" is effectively outside the Firewall, making it more vulnerable to attacks. For this reason, you should only enable the DMZ feature when required.

URL Filter

If you want to limit access to certain sites on the Internet, you can use this feature. The URL filter will check each Web site access. If the address, or part of the address, is included in the block site list, access will be denied.

On the *Advanced Internet* screen, select the desired setting:

- **Disable** - disable this feature.
- **Block By Schedule** - block according to the settings on the *Schedule* page.
- **Block Always** - allow blocking all of the time, independent of the *Schedule* page.

Click the **Configure URL Filter** button to open the URL Filter screen, allowing you to create or modify the filter strings which determine which sites will be blocked.

URL Filter Screen

This screen is displayed when the **Configure URL Filter** button on the *Advanced Internet* screen is clicked.

Figure 56: URL Filter Screen

Data - URL Filter Screen

| Current Filter Strings | |
|-------------------------------|---|
| Current Filter Strings | <p>The list contains the current list of items to block.</p> <ul style="list-style-type: none"> • To add to the list, use the "Add" option below. • To delete an entry, select it and click Delete button. • To delete all entries, click the Delete All button. |
| Add Filter String | <p>To add to the current list, type the word or domain name you want to block into the field provided, then click the Add button.</p> <p>Filter strings should be as specific as possible. Otherwise, you may block access to many more sites than intended.</p> |

| Trusted PC | |
|-------------------------|---|
| Allow Trusted PC | Enable this to allow one computer to have unrestricted access to the Internet. For this PC, the URL filter will be ignored. If enabled, you must select the PC to be the trusted PC. |
| Trusted PC | Select the PC to be the Trusted PC. |

Dynamic DNS (Domain Name Server)

This free service is very useful when combined with the *Virtual Server* feature. It allows Internet users to connect to your Virtual Servers using a URL, rather than an IP Address.

This also solves the problem of having a dynamic IP address. With a dynamic IP address, your IP address may change whenever you connect, which makes it difficult to connect to you.

The DynDNS Service works as follows:

1. You must register for the service at <http://www.dyndns.org> (Registration is free). Your password will be E-mailed to you.
2. After registration, use the "Create New Host" option (at www.dyndns.org) to request your desired Domain name.
3. Enter your data from www.dyndns.org in the WBR-3407's DDNS screen.
4. The WBR-3407 will then automatically ensure that your current IP Address is recorded at <http://www.dyndns.org>
5. From the Internet, users will be able to connect to your Virtual Servers (or DMZ PC) using your Domain name, as shown on this screen.

Dynamic DNS Screen

Select *Advanced* on the main menu, then *Dynamic DNS*, to see a screen like the following:

Figure 57: DDNS Screen

Data - Dynamic DNS Screen

| DDNS Service | |
|----------------------------------|---|
| Use a Dynamic DNS Service | Use this to enable or disable the DDNS feature as required. |
| DDNS Data | |
| Service Provider | Select the desired DDNS Service provider. |
| Host Name | Enter the domain name allocated to you by the DDNS Service. If you have more than one name, enter the name you wish to use. |
| User Name | Enter your Username for the DDNS Service. |
| Password | Enter your current password for the DDNS Service. |
| Domain Name | Enter the domain name allocated to you by the DDNS Service. If you have more than one name, enter the name you wish to use. |
| DDNS Status | <ul style="list-style-type: none"> • This message is returned by the DDNS Server • Normally, this message should be "Update successful" • If the message is "No host", this indicates the host name entered was not allocated to you. You need to connect to DDNS Service provider and correct this problem. |

Firewall Rules

The **Firewall Rules** screen allows you to define "Firewall Rules" which can allow or prevent certain traffic.

By default:

- All Outgoing traffic is permitted.
- All Incoming traffic is denied.

"Traffic" means incoming connection attempts, not packets.

Because of this default behavior, any **Outgoing** rules will generally **Block** traffic, and **Incoming** rules will generally **Allow** traffic.

Firewall Rules Screen

An example screen is shown below.

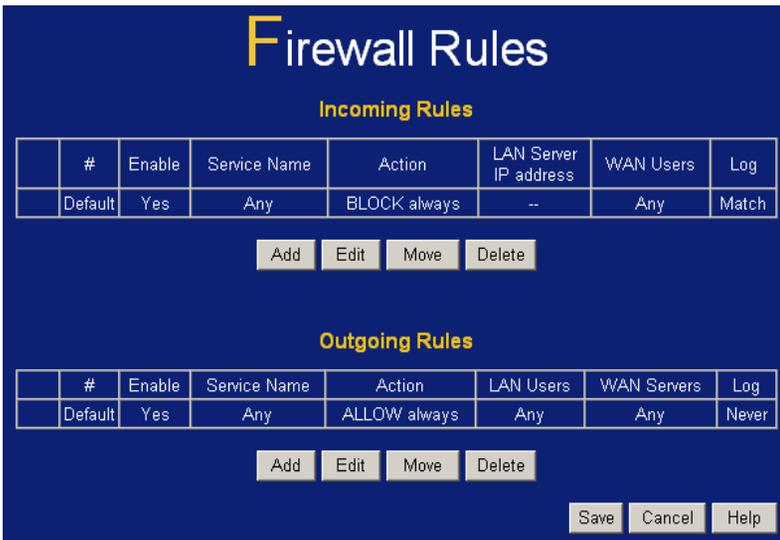

Figure 58 Firewall Screen

Data – Firewall Rules

| Incoming Rules | |
|----------------|---|
| # | For the default rule, this will display "Default". For rules which you create, this will display a radio button which allows you to select the rule. |
| Enable | Indicates whether or not the rule is currently enabled. For rules you have added, this column will contain a checkbox, allowing you to easily enable or disable the rule. (Click "Save" after making any changes.) |
| Service Name | The Service covered by this rule. |
| Action | The action performed on connections which are covered by this rule. |
| LAN Server | The PC or Server on your LAN to which traffic covered by this rule will be sent. |

| | |
|-----------------------|---|
| WAN Users | The WAN IP address or addresses covered by this rule. |
| Log | Indicates whether or not connections covered by this rule should be logged. |
| Buttons | Use the <i>Add</i> button to create a new rule. The other buttons - <i>Edit</i> , <i>Move</i> , or <i>Delete</i> - require that a rule be selected first. Use the radio buttons in the left column to select the desired rule. |
| Outgoing Rules | |
| # | For the default rule, this will display "Default". For rules which you create, this will display a radio button which allows you to select the rule. |
| Enable | Indicates whether or not the rule is currently enabled. For rules you have added, this column will contain a checkbox, allowing you to easily enable or disable the rule. (Click "Save" after making any changes.) |
| Service Name | The Service covered by this rule. |
| Action | The action performed on connections which are covered by this rule. |
| LAN Users | The LAN PC or PCs covered by this rule. |
| WAN Servers | The WAN IP address or addresses covered by this rule. |
| Log | Indicates whether or not connections covered by this rule should be logged. |
| Buttons | Use the <i>Add</i> button to create a new rule. The other buttons - <i>Edit</i> , <i>Move</i> , or <i>Delete</i> - require that a rule be selected first. Use the radio buttons in the left column to select the desired rule. |

Incoming Rules

This screen is displayed when the "Add" or "Edit" button for Incoming Rules is clicked.

Inbound Services

Service:

Action:

Send to LAN Server:

WAN Users:

Single/Start: . . .

Finish: . . .

Log:

Figure 59: Inbound Services Screen

Data – Incoming Rules Screen

| Inbound Services | |
|---------------------------|---|
| Service | Select the desired Service. This determines which packets are covered by this rule. If necessary, you can define a new Service on the "Services" screen, by defining the protocols and port numbers used by the Service. |
| Action | <p>Select the desired action for packets covered by this rule:</p> <ul style="list-style-type: none"> • ALLOW always • ALLOW by schedule, otherwise Block • BLOCK always • BLOCK by schedule, otherwise Allow <p>Note:</p> <ul style="list-style-type: none"> • Any inbound traffic which is not allowed by rules you create will be blocked by the Default rule. • BLOCK rules are only useful if the traffic is already covered by an ALLOW rule. (That is, you wish to block a sub-set of traffic which is currently allowed by another rule.) • To define the Schedule used in these selections, use the "Schedule" screen. |
| Send to LAN Server | Select the PC or Server on your LAN which will receive the inbound traffic covered by this rule. |
| WAN Users | <p>These settings determine which packets are covered by the rule, based on their source (WAN) IP address. Select the desired option:</p> <ul style="list-style-type: none"> • Any - All IP addresses are covered by this rule. • Address range - If this option is selected, you must enter the desired values in the "Single/Start" and "Finish" fields to determine the address range. • Single address - Enter the required address in the "Single/Start" fields. |

| | |
|------------|--|
| Log | <p>This determines whether packets covered by this rule are logged. Select the desired action.</p> <ul style="list-style-type: none"> • Always - always log traffic considered by this rule, whether it matches or not. (This is useful when debugging your rules.) • Never - never log traffic considered by this rule, whether it matches or not. • Match - Log traffic only if it matches this rule. (The action is determined by this rule.) • Not Match - Log traffic which is considered by this rule, but does not match (The action is NOT determined by this rule.) |
|------------|--|

Outgoing Rules

This screen is displayed when the "Add" or "Edit" button for Outgoing Rules is clicked.

Figure 60: Outbound Services Screen

Data - Outbound Rules Screen

| Outbound Services | |
|-------------------|---|
| Service | Select the desired Service or application to be covered by this rule. If the desired service or application does not appear in the list, you must define it using the "Services" menu option |
| Action | <p>Select the desired action for packets covered by this rule:</p> <ul style="list-style-type: none"> • BLOCK always • BLOCK by schedule, otherwise Allow • ALLOW always • ALLOW by schedule, otherwise Block <p>Note:</p> <ul style="list-style-type: none"> • Any outbound traffic which is not blocked by rules you create will be allowed by the Default rule. • ALLOW rules are only useful if the traffic is already covered by a BLOCK rule. (That is, you wish to allow a subset of traffic which is currently blocked by another rule.) |

| | |
|------------------|---|
| | <ul style="list-style-type: none"> • To define the Schedule used in these selections, use the "Schedule" screen. |
| LAN Users | <p>Select the desired option to determine which PCs are covered by this rule:</p> <ul style="list-style-type: none"> • Any - All PCs are covered by this rule. • Single PC - Only the selected PC is covered by this rule. If selected, you must select the PC. <p>PC - If using Single PC above, select the PC or Server on your LAN which will be covered by this rule.</p> |
| WAN Users | <p>These settings determine which packets are covered by the rule, based on their source (WAN) IP address. Select the desired option:</p> <ul style="list-style-type: none"> • Any - All IP addresses are covered by this rule. • Address range - If this option is selected, you must enter the "Start" and "Finish" fields. • Single address - Enter the required address in the "Single/Start" fields. |
| Log | <p>This determines whether packets covered by this rule are logged. Select the desired action.</p> <ul style="list-style-type: none"> • Always - always log traffic considered by this rule, whether it matches or not. (This is useful when debugging your rules.) • Never - never log traffic considered by this rule, whether it matches or not. • Match - Log traffic only it matches this rule. (The action is determined by this rule.) • Not Match - Log traffic which is considered by this rule, but does not match (The action is NOT determined by this rule.) |

Firewall Services

This screen is used to modify the list of *Services* which are available when creating Firewall Rules.

Figure 61: Add Services Screen

Data – Add Services

| Services | |
|----------------------|---|
| Services List | This lists all defined Services. |
| Add | Use this to open a sub-screen where you can add a new service. |
| Edit | To modify a service, select it, and then click this button. |
| Delete | Pre-defined Services can not be deleted, but you can use this button to delete any services you have defined. |

Add/Edit Service

This screen is displayed when the *Add* or *Edit* button on the *Services* screen is clicked.

Figure 62 : Add/Edit Service

Data – Add/Edit Service

| Services | |
|--------------------|---|
| Name | If editing, this shows the current name of the Service. If adding a new service, this will be blank, and you should enter a suitable name. |
| Type | Select the protocol used by the Service. |
| Start Port | Enter the beginning of the port range used by the Service. |
| Finish Port | Enter the end of the port range used by the Service. |

Options

This screen allows advanced users to enter or change a number of settings. For normal operation, there is no need to use this screen or change any settings.

An example *Options* screen is shown below.

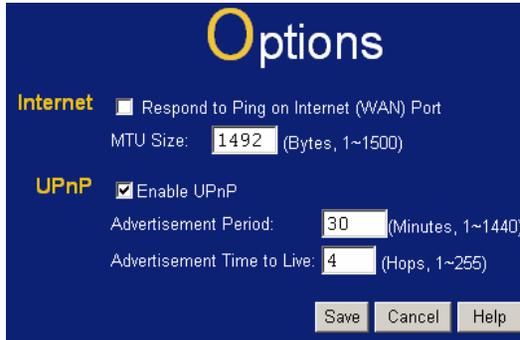

Figure 63: Options Screen

Data - Options Screen

| Internet | |
|-----------------------------------|--|
| Respond to Ping | <ul style="list-style-type: none"> If checked, the WBR-3407 will respond to Ping (ICMP) packets received from the Internet. If not checked, Ping (ICMP) packets from the Internet will be ignored. Disabling this option provides a slight increase in security. |
| MTU Size | Enter a value between 1 and 1500. Note: MTU (Maximum Transmission Unit) size should only be changed if advised to do so by Technical Support. |
| UPnP | |
| UPnP | <ul style="list-style-type: none"> UPnP (Universal Plug and Play) allows automatic discovery and configuration of equipment attached to your LAN. UPnP is by supported Windows ME, XP, or later. If Enabled, this device will be visible via UPnP. If Disabled, this device will not be visible via UPnP. |
| Advertisement Period | Enter the desired value, in minutes. The valid range is from 1 to 1440. |
| Advertisement Time to Live | Enter the desired value, in hops. The valid range is from 1 to 255. |

Schedule

This Schedule can be used for the Firewall Rules and the URL filter.

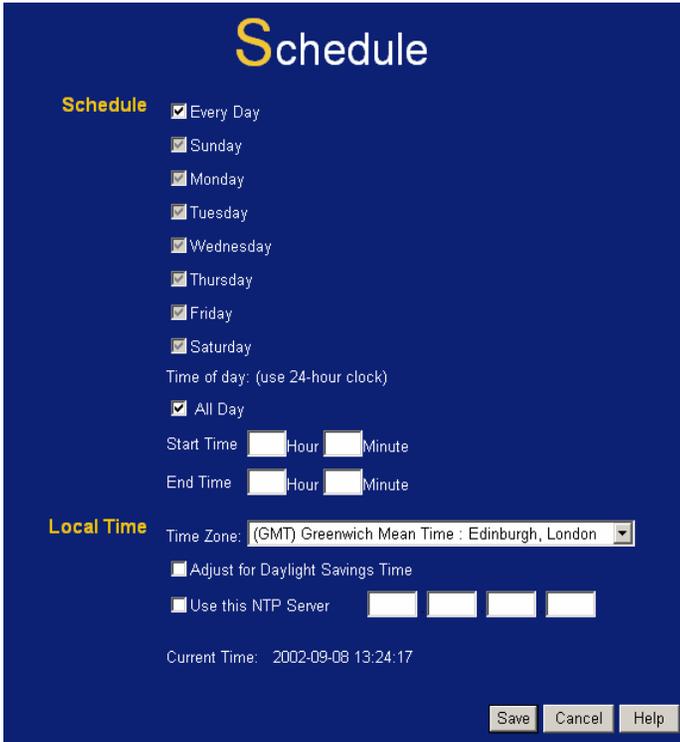

Figure 64: Schedule Screen

Data - Schedule Screen

| Schedule | |
|---|--|
| Sunday, Monday... | Use these checkboxes to select the desired days. |
| Start Time | Enter the start using a 24 hr clock. |
| Finish Time | Enter the finish time using a 24 hr clock. |
| Local Time | |
| Time Zone | In order to display your local time correctly, you must select your "Time Zone" from the list. |
| Adjust for Daylight Savings Time | If your region uses Daylight Savings Time, you must manually check "Adjust for Daylight Savings Time" at the beginning of the adjustment period, and uncheck it at the end of the Daylight Savings period. |
| Use this NTP Server | If you prefer to use a particular NTP server as the primary server, check the checkbox "Use this NTP Server" and enter the Server's IP address in the fields provided.. If this setting is not enabled, the default NTP Servers are used. |
| Current Time | This displays the current time on the WBR-3407. |

Virtual Servers

This feature, sometimes called *Port Forwarding*, allows you to make Servers on your LAN accessible to Internet users. Normally, Internet users would not be able to access a server on your LAN because:

- Your Server does not have a valid external IP Address.
- Attempts to connect to devices on your LAN are blocked by the firewall in this device.

The "Virtual Server" feature solves these problems and allows Internet users to connect to your servers, as illustrated below.

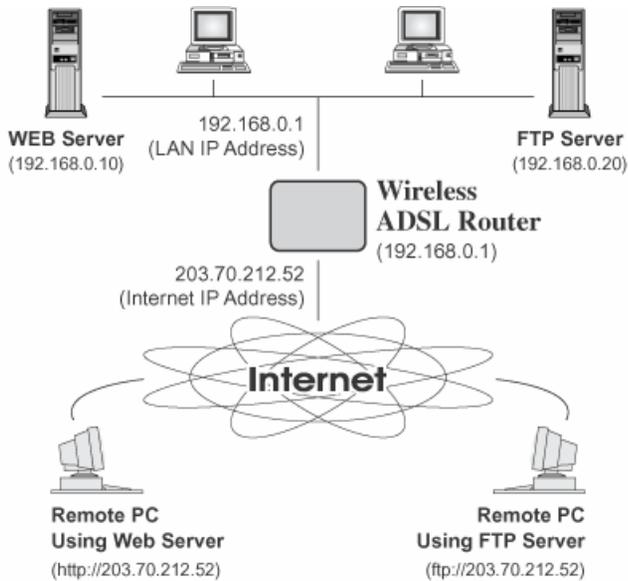

Figure 65: Virtual Servers

IP Address seen by Internet Users

Note that, in this illustration, both Internet users are connecting to the same IP Address, but using different protocols.

To Internet users, all virtual Servers on your LAN have the same IP Address. This IP Address is allocated by your ISP.

This address should be static, rather than dynamic, to make it easier for Internet users to connect to your Servers.

However, you can use the *DDNS (Dynamic DNS)* feature to allow users to connect to your Virtual Servers using a URL, instead of an IP Address.

Virtual Servers Screen

- The "Virtual Servers" feature allows Internet Users to access PCs on your LAN.
- The PCs must be running the appropriate Server Software.
- For Internet Users, ALL of your Servers have the same IP address. This IP address is allocated by your ISP.
- To make it easier for Internet users to connect to your Servers, you can use the "DDNS" feature. This allows Internet users to connect to your Servers with a URL, rather than an IP address. This technology works even if your ISP allocates dynamic IP addresses (IP address is allocated upon connection, so it may change each time you connect).

Figure 66: Virtual Servers Screen

Data - Virtual Servers Screen

| Servers | |
|--------------------|---|
| Servers | This lists a number of common Server types. If the desired Server type is not listed, you can create a Firewall Rule to achieve the same effect as the Virtual Server function. |
| Properties | |
| Enable | Use this to Enable or Disable support for this Server, as required. If Enabled, you must select the PC to which this traffic will be sent. |
| PC (Server) | Select the PC for this Server. The PC must be running the appropriate Server software. |

For each entry, the PC must be running the appropriate Server software.

If the desired Server type is not listed, you can define your own Servers, using the Firewall Rules.

Connecting to the Virtual Servers

Once configured, anyone on the Internet can connect to your Virtual Servers. They must use the Internet IP Address (the IP Address allocated to you by your ISP).

e.g.

http://203.70.212.52

ftp://203.70.212.52

It is more convenient if you are using a Fixed IP Address from your ISP, rather than Dynamic. However, you can use the *Dynamic DNS* feature to allow users to connect to your Virtual Servers using a URL, rather than an IP Address.

From the Internet, ALL Virtual Servers have the IP Address allocated by your ISP

Chapter 7

Advanced Administration

This Chapter explains the settings available via the "Administration" section of the menu.

Overview

Normally, it is not necessary to use these screens, or change any settings. These screens and settings are provided to deal with non-standard situations, or to provide additional options for advanced users.

The available settings and features are:

| | |
|----------------------------|--|
| PC Database | This is the list of PCs shown when you select the "DMZ PC" or a "Virtual Server". This database is maintained automatically, but you can add and delete entries for PCs which use a Fixed (Static) IP Address. |
| Config File | Backup or restore the configuration file for the WBR-3407. This file contains all the configuration data. |
| Logging & Email | View or clear all logs, set E-Mailing of log files and alerts. |
| Diagnostics | Perform a Ping or DNS Lookup. |
| Remote Admin | Allow settings to be changed from the Internet.. |
| Routing | Only required if your LAN has other Routers or Gateways. |
| Upgrade Firmware | Upgrade the Firmware (software) installed in your WBR-3407. |

PC Database

The PC Database is used whenever you need to select a PC (e.g. for the "DMZ" PC).

- It eliminates the need to enter IP addresses.
- Also, you do not need to use fixed IP addresses on your LAN.

However, if you do use a fixed IP address on some devices on your LAN, you should enter details of each such device into the PC database, using the PC Database screen.

PC Database Screen

An example *PC Database* screen is shown below.

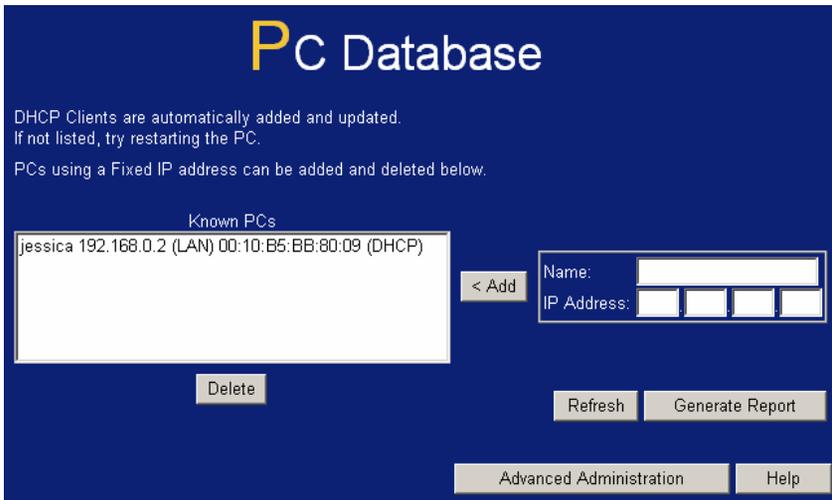

Figure 67: PC Database

- PCs which are "DHCP Clients" are automatically added to the database, and updated as required.
- By default, non-Server versions of Windows act as "DHCP Clients"; this setting is called "Obtain an IP Address automatically".
- The WBR-3407 uses the "Hardware Address" to identify each PC, not the name or IP address. The "Hardware Address" can only change if you change the PC's network card or adapter.
- This system means you do NOT need to use Fixed (static) IP addresses on your LAN. However, you can add PCs using Fixed (static) IP Addresses to the PC database if required.

Data - PC Database Screen

| | |
|--------------------------------|--|
| Known PCs | This lists all current entries. Data displayed is <i>name (IP Address) type</i> . The "type" indicates whether the PC is connected to the LAN. |
| Name | If adding a new PC to the list, enter its name here. It is best if this matches the PC's "hostname". |
| IP Address | Enter the IP Address of the PC. The PC will be sent a "ping" to determine its hardware address. If the PC is not available (not connected, or not powered On) you will not be able to add it. |
| Buttons | |
| Add | This will add the new PC to the list. The PC will be sent a "ping" to determine its hardware address. If the PC is not available (not connected, or not powered On) you will not be able to add it. |
| Delete | Delete the selected PC from the list. This should be done in 2 situations: <ul style="list-style-type: none"> • The PC has been removed from your LAN. • The entry is incorrect. |
| Refresh | Update the data on screen. |
| Generate Report | Display a read-only list showing full details of all entries in the PC database. |
| Advanced Administration | View the Advanced version of the PC database screen - <i>PC Database (Admin)</i> . See below for details. |

PC Database (Admin)

This screen is displayed if the "Advanced Administration" button on the *PC Database* is clicked. It provides more control than the standard *PC Database* screen.

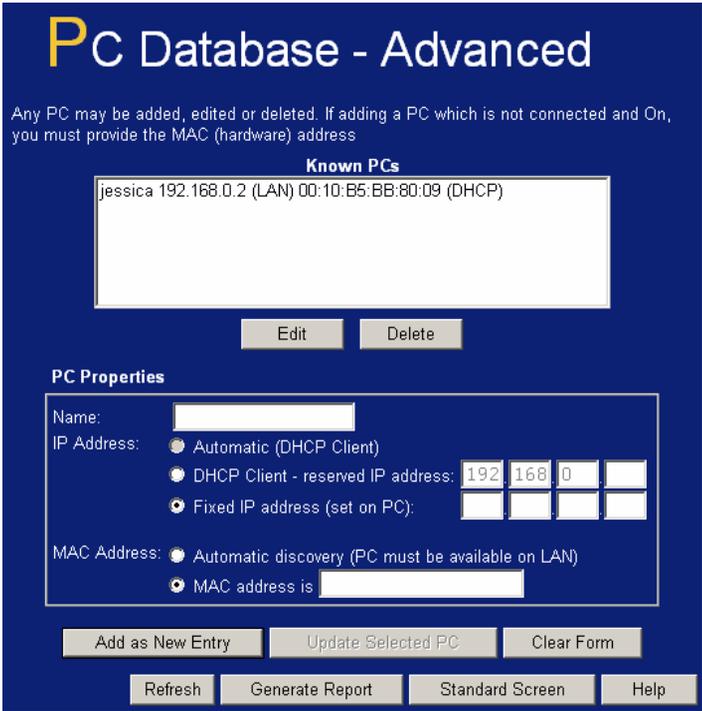

Figure 68: PC Database (Admin)

Data - PC Database (Admin) Screen

| | |
|----------------------|--|
| Known PCs | This lists all current entries. Data displayed is <i>name (IP Address) type</i> . The "type" indicates whether the PC is connected to the LAN. |
| PC Properties | |
| Name | If adding a new PC to the list, enter its name here. It is best if this matches the PC's "hostname". |
| IP Address | Select the appropriate option: <ul style="list-style-type: none"> • Automatic - The PC is set to be a DHCP client (Windows: "Obtain an IP address automatically"). The WBR-3407 will allocate an IP address to this PC when requested to do so. The IP address could change, but normally won't. • DCHP Client - Reserved IP Address - Select this if the PC is set to be a DCHP client, and you wish to guarantee that the WBR-3407 will always allocate the same IP Address to this PC. Enter the required IP address. • Fixed IP Address - Select this if the PC is using a Fixed (Static) IP address. Enter the IP address allocated to the PC. (The PC itself must be configured to use this IP address.) |

| | |
|---------------------------|---|
| MAC Address | <p>Select the appropriate option</p> <ul style="list-style-type: none"> • Automatic discovery - Select this to have the WBR-3407 contact the PC and find its MAC address. This is only possible if the PC is connected to the LAN and powered On. • MAC address is - Enter the MAC address on the PC. The MAC address is also called the "Hardware Address", "Physical Address", or "Network Adapter Address". The WBR-3407 uses this to provide a unique identifier for each PC. Because of this, the MAC address can NOT be left blank. |
| Buttons | |
| Add as New Entry | <p>Add a new PC to the list, using the data in the "Properties" box. If "Automatic discovery" (for MAC address) is selected, the PC will be sent a "ping" to determine its hardware address. This will fail unless the PC is connected to the LAN, and powered on.</p> |
| Update Selected PC | <p>Update (modify) the selected PC, using the data in the "Properties" box.</p> |
| Clear Form | <p>Clear the "Properties" box, ready for entering data for a new PC.</p> |
| Refresh | <p>Update the data on screen.</p> |
| Generate Report | <p>Display a read-only list showing full details of all entries in the PC database.</p> |
| Standard Screen | <p>Click this to view the standard <i>PC Database</i> screen.</p> |

Config File

This feature allows you to download the current settings from the WBR-3407, and save them to a file on your PC.

You can restore a previously-downloaded configuration file to the WBR-3407, by uploading it to the WBR-3407.

This screen also allows you to set the WBR-3407 back to its factory default configuration. Any existing settings will be deleted.

An example *Config File* screen is shown below.

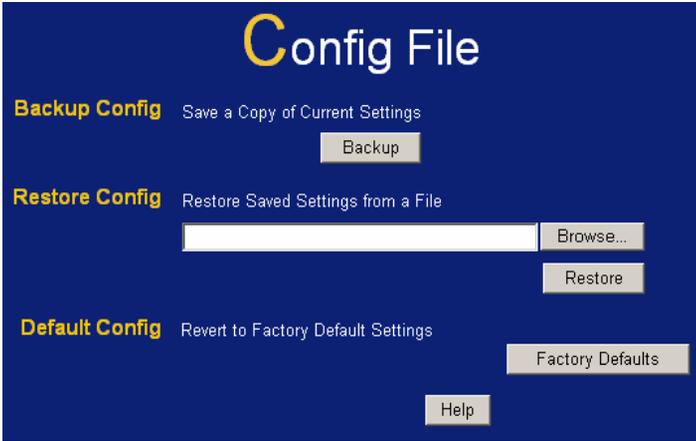

Figure 69: Config File Screen

Data - Config File Screen

| | |
|-----------------------|---|
| Backup Config | Use this to download a copy of the current configuration, and store the file on your PC. Click <i>Download</i> to start the download. |
| Restore Config | <p>This allows you to restore a previously-saved configuration file back to the WBR-3407.</p> <p>Click <i>Browse</i> to select the configuration file, then click <i>Restore</i> to upload the configuration file.</p> <p>WARNING !</p> <p>Uploading a configuration file will destroy (overwrite) ALL of the existing settings.</p> |
| Default Config | <p>Clicking the <i>Factory Defaults</i> button will reset the WBR-3407 to its factory default settings.</p> <p>WARNING !</p> <p>This will delete ALL of the existing settings.</p> |

Logging

The Logs record various types of activity on the WBR-3407. This data is useful for troubleshooting, but enabling all logs will generate a large amount of data and adversely affect performance.

Since only a limited amount of log data can be stored in the WBR-3407, log data can also be E-mailed to your PC. Use the *E-mail* screen to configure this feature.

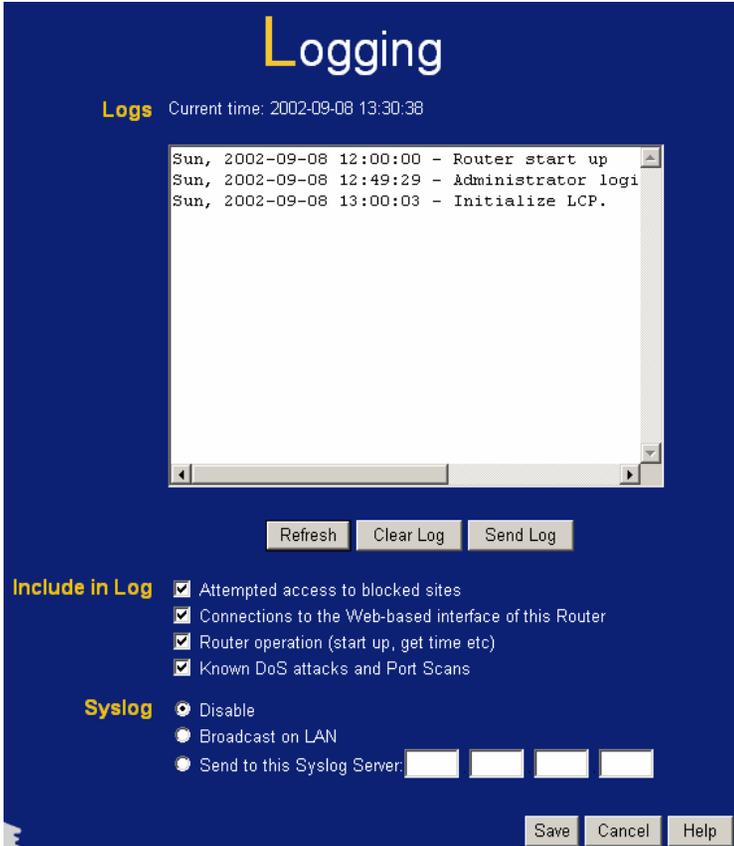

Figure 70: Logging Screen

Data - Logging Screen

| Logs | |
|---------------------|---|
| Current Time | The current time on the WBR-3407 is displayed. |
| Log Data | Current log data is displayed in this panel. |
| Buttons | <p>There are three (3) buttons</p> <ul style="list-style-type: none"> • Refresh - Update the log data. • Clear Log - Clear the log, and restart it. This makes new messages easier to read. • Send Log - E-mail the log immediately. This is only functional if the <i>E-mail</i> screen has been configured. |

| Logs | |
|-----------------------------|---|
| Include (Checkboxes) | <p>Use these checkboxes to determine which events are included in the log. Checking all options will increase the size of the log, so it is good practice to disable any events which are not really required.</p> <ul style="list-style-type: none"> • Attempted access to blocked sites - If checked, attempted Internet accesses which were blocked are logged. • Connections to the Web-based interface of this Router - If checked, this will log connections TO this Router, rather than through this Router to the Internet. • Router operation - If checked, other Router operations (not covered by the selections above) will be logged. • Known DoS attacks and Port Scans - If checked, Denial of Service attacks, as well as port scans, will be logged. |
| Syslog | |
| Disable | Data is not sent to a Syslog Server. |
| Broadcast on LAN | The Syslog data is broadcast, rather than sent to a specific Syslog server. Use this if your Syslog Server does not have a fixed IP address. |
| Syslog | If your Syslog server has a fixed IP address, select this option, and enter the IP address of your Syslog server. |

E-mail

This screen allows you to E-mail Logs and Alerts. A sample screen is shown below.

Figure 71: E-mail Screen

Data – E-mail Screen

| E-Mail Notification | |
|--|--|
| Turn E-mail Notification on | Check this box to enable this feature. If enabled, the E-mail address information (below) must be provided. |
| Send to this E-mail address | Enter the E-mail address the Log is to be sent to. The E-mail will also show this address as the Sender's address. |
| Outgoing (SMTP) Mail Server | Enter the address or IP address of the SMTP (Simple Mail Transport Protocol) Server you use for outgoing E-mail. |
| My SMTP Mail Server requires authentication | To stop spammers, many SMTP mail servers require you to log in to send mail. In this case, enable this checkbox, and enter the login information (User name and Password) in the fields below. |
| User Name | If you have enabled "My SMTP Mail Server requires authentication" above, enter the User Name required to login to your SMTP Server. |
| Password | If you have enabled "My SMTP Mail Server requires authentication" above, enter the password required to login to your SMTP Server. |

| E-mail Alerts | |
|---------------------------------------|---|
| Send E-mail alerts immediately | <p>You can choose to have alerts E-mailed to you, by checking the desired checkboxes. The WBR-3407 can send an immediate alert when it detects a significant security incident such as</p> <ul style="list-style-type: none"> • A known hacker attack is directed at your IP address • A computer on the Internet scans your IP address for open ports • Someone on your LAN (Local Area Network) tries to visit a blocked site. |
| E-mail Logs | |
| Send Logs | <p>Select the desired option for sending the log by E-mail.</p> <ul style="list-style-type: none"> • Never (default) - This feature is disabled; Logs are not sent. • When log is full - The time is not fixed. The log will be sent when the log is full, which will depend on the volume of traffic. • Hourly, Daily, Weekly... - The log is sent on the interval specified. <ul style="list-style-type: none"> • If "Daily" is selected, the log is sent at the time specified. • If the day is specified, the log is sent once per week, on the specified day. • Select the time of day you wish the E-mail to be sent. • If the log is full before the time specified to send it, it will be sent regardless. |

Diagnostics

This screen allows you to perform a "Ping" or a "DNS lookup". These activities can be useful in solving network problems.

An example *Network Diagnostics* screen is shown below.

Figure 72: Network Diagnostics Screen

Data - Network Diagnostics Screen

| Ping | |
|-----------------------------|---|
| Ping this IP Address | Enter the IP address you wish to ping. The IP address can be on your LAN, or on the Internet. Note that if the address is on the Internet, and no connection currently exists, you could get a "Timeout" error. In that case, wait a few seconds and try again. |
| Ping Button | After entering the IP address, click this button to start the "Ping" procedure. The results will be displayed in the <i>Ping Results</i> pane. |
| DNS Lookup | |
| Internet name | Enter the Domain name or URL for which you want a DNS (Domain Name Server) lookup. Note that if the address is on the Internet, and no connection currently exists, you could get a "Timeout" error. In that case, wait a few seconds and try again. |
| Lookup Button | After entering the Domain name/URL, click this button to start the "DNS Lookup" procedure. |
| Routing | |
| Display | Click this button to display the internal routing table. This information can be used by Technical Support and other staff who understand Routing Tables. |

Remote Admin

If enabled, this feature allows you to manage the WBR-3407 via the Internet.

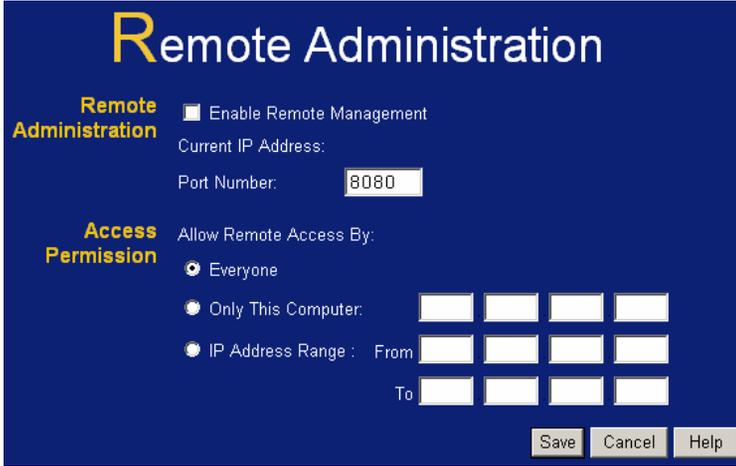

Figure 73: Remote Administration Screen

Data - Remote Administration Screen

| Remote Administration | |
|---------------------------------|--|
| Enable Remote Management | <p>Check to allow administration/management via the Internet. (To connect, see below).</p> <p>If Disabled, this device will ignore Administration connection attempts from the Internet.</p> |
| Current IP Address | <p>This is the current address you will use when accessing this device from the Internet. To connect, see details and an example below.</p> |
| Port Number | <p>Enter a port number between 1024 and 65535. The default for HTTP (Web) connections is port 80, but using port 80 will prevent the use of a Web "Virtual Server" on your LAN. So using a different port number is recommended. The default value is 8080.</p> <p>The port number must be specified in your Browser when you connect, as detailed above.</p> |
| Access Permission | |
| Allow Remote Access | <p>Select the desired option.</p> <ul style="list-style-type: none"> • Everyone - allow access by everyone on the Internet. • Only This Computer - allow access by only one IP address. Enter the desired IP address. • IP Address Range - allow access from a range of IP addresses on the Internet. Enter a beginning and ending IP address to define the allowed range. <p>For security, you should restrict access to as few external IP addresses as practical.</p> |

To connect from a remote PC via the Internet

1. Ensure your Internet connection is established, and start your Web Browser.
2. In the "Address" bar, enter "HTTP://" followed by the Internet IP Address of the WBR-3407. If the port number is not 80, the port number is also required. (After the IP Address, enter ":" followed by the port number.)

e.g.

`HTTP://123.123.123.123:8080`

This example assumes the WAN IP Address is 123.123.123.123, and the port number is 8080.

3. You will then be prompted for the login name and password for this device.

Routing

Overview

- If you don't have other Routers or Gateways on your LAN, you can ignore the "Routing" page completely.
- If the WBR-3407 is only acting as a Gateway for the local LAN segment, ignore the "Routing" page even if your LAN has other Routers.
- If your LAN has a standard Router (e.g. Cisco) on your LAN, and the WBR-3407 is to act as a Gateway for all LAN segments, enable RIP (Routing Information Protocol) and ignore the Static Routing table.
- If your LAN has other Gateways and Routers, and you wish to control which LAN segments use each Gateway, do NOT enable RIP (Routing Information Protocol). Configure the Static Routing table instead. (You also need to configure the other Routers.)
- If using Windows 2000 Data center Server as a software Router, enable RIP on the WBR-3407, and ensure the following Windows 2000 settings are correct:
 - Open *Routing and Remote Access*
 - In the console tree, select *Routing and Remote Access*, *[server name]*, *IP Routing*, *RIP*
 - In the "Details" pane, right-click the interface you want to configure for RIP version 2, and then click "Properties".
 - On the "General" tab, set *Outgoing packet protocol* to "RIP version 2 broadcast", and *Incoming packet protocol* to "RIP version 1 and 2".

Routing Screen

The routing table is accessed by the *Routing* link on the *Administration* menu.

Using this Screen

Generally, you will use either RIP (Routing Information Protocol) OR the Static Routing Table, as explained above, although it is possible to use both methods simultaneously.

Static Routing Table

- If RIP is not used, an entry in the routing table is required for each LAN segment on your Network, other than the segment to which this device is attached.
- The other Routers must also be configured. See *Configuring Other Routers on your LAN* later in this chapter for further details and an example.

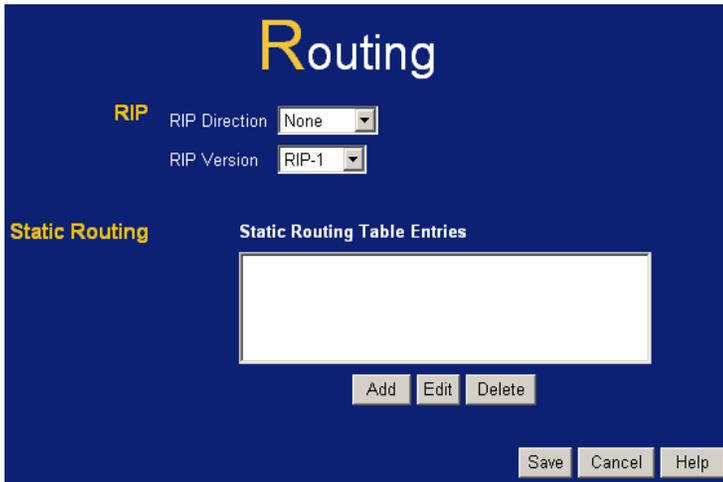

Figure 74: Routing Screen

Data - Routing Screen

| RIP | |
|-------------------------------------|--|
| RIP Direction | Select the desired RIP Direction. |
| RIP Version | Choose the RIP Version for the Server. |
| Static Routing | |
| Static Routing Table Entries | <p>This list shows all entries in the Routing Table.</p> <ul style="list-style-type: none"> This area shows details of the selected item in the list. Change any the properties as required, then click the "Edit" button to save the changes to the selected entry. |
| Buttons | |
| Add | Add a new entry to the Static Routing table, using the data shown in the "Properties" area on screen. The entry selected in the list is ignored, and has no effect. |
| Edit | Update the current Static Routing Table entry, using the data shown in the table area on screen. |
| Delete | Delete the current Static Routing Table entry. |
| Save | Save the RIP setting. This has no effect on the Static Routing Table. |

Configuring Other Routers on your LAN

It is essential that all IP packets for devices not on the local LAN be passed to the WBR-3407, so that they can be forwarded to the external LAN, WAN, or Internet. To achieve this, the local LAN must be configured to use the WBR-3407 as the *Default Route* or *Default Gateway*.

Local Router

The local router is the Router installed on the same LAN segment as the WBR-3407. This router requires that the *Default Route* is the WBR-3407 itself. Typically, routers have a special entry for the *Default Route*. It should be configured as follows.

| | |
|-------------------------------|--|
| Destination IP Address | Normally 0.0.0.0, but check your router documentation. |
| Network Mask | Normally 0.0.0.0, but check your router documentation. |
| Gateway IP Address | The IP Address of the WBR-3407. |
| Metric | 1 |

Other Routers on the Local LAN

Other routers on the local LAN must use the WBR-3407's *Local Router* as the *Default Route*. The entries will be the same as the WBR-3407's local router, with the exception of the *Gateway IP Address*.

- For a router with a direct connection to the WBR-3407's local Router, the *Gateway IP Address* is the address of the WBR-3407's local router.
- For routers which must forward packets to another router before reaching the WBR-3407's local router, the *Gateway IP Address* is the address of the intermediate router.

Static Routing - Example

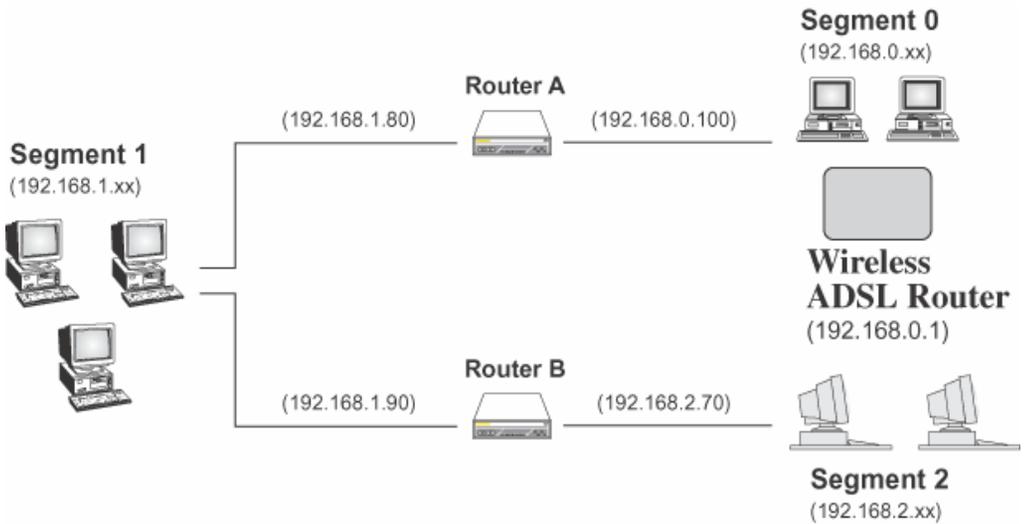

Figure 75: Routing Example

For the WBR-3407's Routing Table

For the LAN shown above, with 2 routers and 3 LAN segments, the WBR-3407 requires 2 entries as follows.

| Entry 1 (Segment 1) | |
|----------------------------|---|
| Destination IP Address | 192.168.1.0 |
| Network Mask | 255.255.255.0 (Standard Class C) |
| Gateway IP Address | 192.168.0.100 (WBR-3407's local Router) |
| Metric | 2 |
| Entry 2 (Segment 2) | |
| Destination IP Address | 192.168.2.0 |
| Network Mask | 255.255.255.0 (Standard Class C) |

| | |
|--------------------|---------------|
| Gateway IP Address | 192.168.0.100 |
| Metric | 3 |

For Router A's Default Route

| | |
|------------------------|-------------------------------------|
| Destination IP Address | 0.0.0.0 |
| Network Mask | 0.0.0.0 |
| Gateway IP Address | 192.168.0.1 (WBR-3407's IP Address) |

For Router B's Default Route

| | |
|------------------------|--|
| Destination IP Address | 0.0.0.0 |
| Network Mask | 0.0.0.0 |
| Gateway IP Address | 192.168.1.80 (WBR-3407's local router) |

Upgrade Firmware

The firmware (software) in the WBR-3407 can be upgraded using your Web Browser.

You must first download the upgrade file, then select *Upgrade Firmware* on the *Administration* menu. You will see a screen like the following.

Figure 76: Router Upgrade Screen

To perform the Firmware Upgrade:

4. Click the *Browse* button and navigate to the location of the upgrade file.
5. Select the upgrade file. Its name will appear in the *Upgrade File* field.
6. Click the *Start Upgrade* button to commence the firmware upgrade.

The WBR-3407 is unavailable during the upgrade process, and must restart when the upgrade is completed. Any connections to or through the WBR-3407 will be lost.

Appendix A

Troubleshooting

This Appendix covers the most likely problems and their solutions.

Overview

This chapter covers some common problems that may be encountered while using the WBR-3407 and some possible solutions to them. If you follow the suggested steps and the WBR-3407 still does not function properly, contact your dealer for further advice.

General Problems

Problem 1: **Can't connect to the WBR-3407 to configure it.**

Solution 1: Check the following:

- The WBR-3407 is properly installed, LAN connections are OK, and it is powered ON.
- Ensure that your PC and the WBR-3407 are on the same network segment. (If you don't have a router, this must be the case.)
- If your PC is set to "Obtain an IP Address automatically" (DHCP client), restart it.
- If your PC uses a Fixed (Static) IP address, ensure that it is using an IP Address within the range 192.168.0.2 to 192.168.0.254 and thus compatible with the WBR-3407's default IP Address of 192.168.0.1. Also, the Network Mask should be set to 255.255.255.0 to match the WBR-3407.

In Windows, you can check these settings by using *Control Panel-Network* to check the *Properties* for the TCP/IP protocol.

Internet Access

Problem 1: **When I enter a URL or IP address I get a time out error.**

Solution 1: A number of things could be causing this. Try the following troubleshooting steps.

- Check if other PCs work. If they do, ensure that your PCs IP settings are correct. If using a Fixed (Static) IP Address, check the Network Mask, Default gateway and DNS as well as the IP Address.
- If the PCs are configured correctly, but still not working, check the WBR-3407. Ensure that it is connected and ON. Connect to it and check its settings. (If you can't connect to it, check the LAN and power connections.)
- Check the WBR-3407's status screen to see if it is working correctly.

Problem 2: **Some applications do not run properly when using the WBR-3407.**

Solution 2: The WBR-3407 processes the data passing through it, so it is not transparent.

For incoming connections, you must use the Virtual Server or Firewall Rules to specify the PC which will receive the incoming traffic.

You can also use the *DMZ* function. This should work with almost every application, but:

- It is a security risk, since the firewall is disabled.
- Only one (1) PC can use this feature.

Wireless Access

Problem 1: My PC can't locate the WBR3407.

Solution 1: Check the following.

- Your PC is set to *Infrastructure Mode*. (Access Points are always in *Infrastructure Mode*)
- The SSID on your PC and the WBR3407 are the same. Remember that the SSID is case-sensitive. So, for example "Workgroup" does NOT match "workgroup".
- Both your PC and the WBR-3407 must have the same setting for WEP. The default setting for the WBR-3407 is disabled, so your wireless station should also have WEP disabled.
- If WEP is enabled on the WBR-3407, your PC must have WEP enabled, and the key must match.
- If the WBR-3407's *Wireless* screen is set to *Allow Trusted PCs only*, then each of your Wireless stations must have been designated as "Trusted", or the Wireless station will be blocked.
- To see if radio interference is causing a problem, see if connection is possible when close to the WBR-3407. Remember that the connection range can be as little as 100 feet in poor environments.

Problem 2: Wireless connection speed is very slow.

Solution 2: The wireless system will connect at the highest possible speed, depending on the distance and the environment. To obtain the highest possible connection speed, you can experiment with the following:

- WBR-3407 location.
Try adjusting the location and orientation of the WBR-3407.
- Wireless Channel
If interference is the problem, changing to another channel may show a marked improvement.
- Radio Interference
Other devices may be causing interference. You can experiment by switching other devices Off, and see if this helps. Any "noisy" devices should be shielded or relocated.
- RF Shielding
Your environment may tend to block transmission between the wireless stations. This will mean high access speed is only possible when close to the WBR-3407.

Appendix B

About Wireless LANs

This Appendix provides some background information about using Wireless LANs (WLANs).

Modes

Wireless LANs can work in either of two (2) modes:

- Ad-hoc
- Infrastructure

Ad-hoc Mode

Ad-hoc mode does not require an Access Point or a wired (Ethernet) LAN. Wireless Stations (e.g. notebook PCs with wireless cards) communicate directly with each other.

Infrastructure Mode

In Infrastructure Mode, one or more Access Points are used to connect Wireless Stations (e.g. Notebook PCs with wireless cards) to a wired (Ethernet) LAN. The Wireless Stations can then access all LAN resources.

Access Points can only function in "Infrastructure" mode, and can communicate only with Wireless Stations which are set to "Infrastructure" mode.

BSS/ESS

BSS

A group of Wireless Stations and a single Access Point, all using the same ID (SSID), form a Basic Service Set (BSS).

Using the same SSID is essential. Devices with different SSIDs are unable to communicate with each other.

ESS

A group of Wireless Stations, and multiple Access Points, all using the same ID (ESSID), form an Extended Service Set (ESS).

Different Access Points within an ESS can use different Channels. In fact, to reduce interference, it is recommended that adjacent Access Points **SHOULD** use different channels.

As Wireless Stations are physically moved through the area covered by an ESS, they will automatically change to the Access Point which has the least interference or best performance. This capability is called **Roaming**. (Access Points do not have or require Roaming capabilities.)

Channels

The Wireless Channel sets the radio frequency used for communication.

- Access Points use a fixed Channel. You can select the Channel used. This allows you to choose a Channel which provides the least interference and best performance. In the USA and Canada, 11 channels are available. If using multiple Access Points, it is better if adjacent Access Points use different Channels to reduce interference.
- In "Infrastructure" mode, Wireless Stations normally scan all Channels, looking for an Access Point. If more than one Access Point can be used, the one with the strongest signal is used. (This can only happen within an ESS.)
- If using "Ad-hoc" mode (no Access Point), all Wireless stations should be set to use the same Channel. However, most Wireless stations will still scan all Channels to see if there is an existing "Ad-hoc" group they can join.

WEP

WEP (Wired Equivalent Privacy) is a standard for encrypting data before it is transmitted.

This is desirable because it is impossible to prevent snoopers from receiving any data which is transmitted by your Wireless Stations. But if the data is encrypted, then it is meaningless unless the receiver can decrypt it.

If WEP is used, the Wireless Stations and the Access Point must have the same settings for each of the following:

| | |
|---------------------------|--|
| WEP | Off, 64 Bit, 128 Bit |
| Key | For 64 Bit encryption, the Key value must match. For 128 Bit encryption, the Key value must match |
| WEP Authentication | Open System or Shared Key. |

Wireless LAN Configuration

To allow Wireless Stations to use the Access Point, the Wireless Stations and the Access Point must use the same settings, as follows:

- Mode** On client Wireless Stations, the mode must be set to "Infrastructure".
(The Access Point is always in "Infrastructure" mode.)
- SSID (ESSID)** Wireless Stations should use the same SSID (ESSID) as the Access Point they wish to connect to. Alternatively, the SSID can be set to "any" or null (blank) to allow connection to any Access Point.
- WEP** The Wireless Stations and the Access Point must use the same settings for WEP (Off, 64 Bit, 128 Bit).
- WEP Key:** If WEP is enabled, the Key must be the same on the Wireless Stations and the Access Point.
- WEP Authentication:** If WEP is enabled, all Wireless Stations must use the same setting as the Access Point (either "Open System" or "Shared Key").

Appendix C

Specifications

Multi-Function WBR-3407

| | |
|-----------------------|---|
| Model | WBR-3407 |
| ADSL Interface | T1.413, G.DMT, G.lite, multi-mode |
| Dimensions | 189mm(W) * 122mm(D) * 33mm(H) |
| Operating Temperature | 0° C to 40° C |
| Storage Temperature | -10° C to 70° C |
| Network Protocol: | TCP/IP |
| Network Interface: | 4 * 10/100BaseT (RJ45) LAN connection 1 * RJ11 for ADSL line |
| LEDs | 12 |
| Power Adapter | 15 V AC External |

Wireless Interface

| | |
|----------------------|--|
| Standards | IEEE802.11b, IEEE802.11g WLAN, |
| Frequency | 2.4 to 2.4835GHz (Industrial Scientific Medical Band) |
| Channels | Maximum 14 Channels, depending on regulatory authorities |
| Modulation | CCK, DQPSK, DBPSK, OFDM/CCK |
| Data Rate | Up to 54 Mbps |
| WEP | 64Bit, 128Bit |
| Output Power | 13dBm (typical) |
| Receiver Sensitivity | -80dBm Min. |

Regulatory Approvals

FCC Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

To assure continued compliance, any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. (Example - use only shielded interface cables when connecting to computer or peripheral devices).

FCC Radiation Exposure Statement

This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

CE Approval

CE Standards

This product complies with the 99/5/EEC directives, including the following safety and EMC standards:

- EN300328-2
- EN301489-1/-17
- EN60950

CE Marking Warning

This is a Class B product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.
